Extra information in v23: what to cut

Nothing in the document has changed. This is for you to mark up.

Three reviewers read every sentence, table cell and exhibit label on pages 1 to 15. The source list was not audited. The test was your test: does this serve the point of its paragraph, its section and the whole argument, not just its own sentence? Each item is marked CUT, TRIM (with clean replacement wording) or KEEP.

Where a sentence is already being changed in the v24 review, they judged the proposed wording. Replacements follow your six writing rules. A "dependency" says when a cut would leave a source cited nowhere, or touch a v24 fix.

Totals: 73 cut, 77 trim and 99 keep. The kept items are listed at the end, with the reason each one only looks extra.

Read these first

1. Errors found while auditing, which I checked myself

- **Source 83 does not support its sentence.** Page 12 cites it for "It sells Aladdin as the system it runs internally 9, 83". Source 83 is the 2019 eFront acquisition release, and it says nothing of the kind. Source 9 (Rosales: "BlackRock is the biggest user of Aladdin") supports the claim on its own. The reviewer recommends cutting the sentence anyway. If you keep it, cite only 9 and remove 83 from the source list.
- **Exhibit 6's note says "Three of the five transcripts are machine-made".** By the source list it is four: Woodhead's auto-captions, Goel, Khara and Miller. Only Newman's is a published transcript.
- **Exhibit 1's source line leaves out six sources its table cites:** 9, 16, 17, 19, 22 and 24.
- **Exhibit 3's source line cites Rosales "at 2:35",** but source 9's list of quoted times does not include it. The quote ("embedded across all of those hundred front-end applications") is at about 2:34 in the recording. Add the time to source 9, or drop the timestamps as the reviewer recommends.

2. Where the audit conflicts with something you already decided

- **Exhibit 3's Hosting row.** The reviewer would cut it as off-point, which would also remove sources 35, 36 and 37. You asked for AWS to be shown as live, so I recommend **keeping** it. Your call.
- **Fix 50 (contract value growth without Preqin), which you chose to keep.** The reviewer would cut the whole "24 percent rise includes Preqin" sentence instead. Either keep it with your addition or cut both.
- **Fix 58 (Studio Compute naming) and fix 61 (Spaces), which you chose to keep.** The reviewer would trim Exhibit 4's workspace panel to the credentials line only. That would remove both, along with five other workspace items. Your call.
- **Fix 43, which you chose to cut.** The reviewer goes further and cuts the long-running-operations sentences from v23 altogether, along with the bitemporal sentences. That fits your decision.

3. Larger structural cuts

These change exhibits or whole paragraphs, not just words.

1. **Page 6: merge Exhibits 6 and 7 into one exhibit and drop the Miller row.** The same speakers are described three times on one page, and Woodhead's definition four times. This renumbers Exhibits 8 to 17 and every cross-reference to them. It also leaves source 47 cited nowhere, and fix 21 is no longer needed.
2. **Page 8: cut the private-markets paragraph** from about ten sentences to two, or remove it entirely once the new Finding 2 box (fix 7) is adopted. The material that goes is the purchase dates, the 15,000 fund investments, the transaction types and HPS.
3. **Exhibit 13: drop the third poll** (compliance reporting, 53 percent) and its chart panel. Nothing in the argument uses it, and fix 55's title change becomes moot.
4. **Exhibit 4's workspace panel:** cut it to one line on API tokens and OAuth applications (see the conflict above).
5. **Exhibit 8:** keep the chart, drop the grey 2016 integration bar, and cut the year-by-year figures from the text.
6. **Page 12, paragraphs 3 and 4:** merge them into one five-sentence paragraph. They mostly repeat Parts 1 and 2: the poll, 42 percent, 70 countries, $2.0 billion, the job posting.
7. **Page 14:** trim the SDK paragraph to two sentences. Cut the text under Exhibit 17 that reads the table aloud.
8. **Page 15, About this document:** remove the half that repeats page 2. Keep one copy of the source-type list and one of the receipts explainer.
9. **Direction box 2:** it gives no direction. Make it: "BlackRock could name Studio as the product behind 'Aladdin as a platform' when it speaks to investors." Move the investor quotes into the body.

4. Effect on pending v24 fixes

- **No longer needed if the cuts are taken:** fixes 19, 21, 46, 47 and 48, and the title change in fix 55, because the text they correct is cut. Fix 55's note about respondents stays.
- **Fix 6:** two reviewers would drop the time-limit and "Compl Pending" sentence on page 12, because nothing else uses it. They would keep the "turn it off" point only on page 2, in the page 12 text and in Exhibit 14.
- **Fixes 8 and 14** add near-identical "no published connector" sentences on page 9. Keep one.
- **Fix 9:** use the Smith Garson quote once, on page 9, not in Exhibit 14 as well.
- **Fix 27:** the reviewers and your reader would drop "Disclosed because BlackRock owns more than 5 percent of JPMorgan."
- **Fix 52:** cut "Copilot's guardrails are tested daily" rather than moving it.
- **Sources that would be cited nowhere if every cut is taken:** 17, 21, 25, 27, 35, 36, 37, 47, 59, 73, 80, 82 and 83. They come out of the source list, and the rest renumber.

Cover, executive summary and Part 1 (pages 1 to 6)

p	Verdict	Text to cut or trim	Why it is extra for the overall point	Clean replacement	Dependencies
1	**TRIM**	"Notes made to prepare for interviews, **October 2026**"	"October 2026" repeats the "As of October 19, 2026" line four lines below	Notes made to prepare for interviews	None
2	**TRIM**	"Aladdin Data Cloud **on Snowflake**"	The summary's argument never uses Snowflake, and this reader knows where Data Cloud runs. Snowflake is shown in Exhibits 1 and 4 and in Woodhead's quote	Studio is Aladdin's developer and data layer: APIs and events, Aladdin Data Cloud, and developer tools.	None
2	**TRIM**	"**The caller can turn it off 6. Whether turning it off needs a separate permission is not public.**"	The summary needs the control, not the off-switch. The off-switch and its hedge appear in full on p5, in Exhibit 3, in Exhibit 14, in Exhibit 15 row 4, and on p12 (fix 6). Fix N5 already advises against pitching the off-switch. "By default" keeps the shortened claim honest	Posting an order runs a compliance check by default [source 6].	Differs from fix 6, which keeps p2 unchanged. The full statement and the hedge stay on p12

2	**TRIM**	Fix 3 wording: "**SimCorp offers a portfolio management agent and has announced Agent Launchpad for agents that clients build.**"	The fix 3 note says SimCorp's source shows no agent acting. So SimCorp does not support this sentence's point. Arcesium and Clearwater are enough for the summary. SimCorp stays on p9 and p12	Rivals have begun letting AI agents act. Arcesium's MCP server lets outside AI tools build data pipelines. Clearwater says clients use its agents for trade settlement and cash management.	Already in fix 3 (proposed wording judged). Source 7 is still cited on p9, p12 and in Exhibit 17
2	**TRIM**	Fix 2 wording: "**The team that owns each tool sets which environments, user groups and apps can use it.**"	This is a Copilot registry rule. The new thesis rests on each user's Aladdin permissions, and p12 and Exhibit 14 cover the registry rules. In the summary it is detail	BlackRock already runs AI on Aladdin. Copilot answers questions for staff and clients in about 100 Aladdin applications. It draws on about two thousand registered tools and agents, and each tool maps to an Aladdin API already in production. No public source shows Copilot posting orders.	Already in fix 2. Keep "No public source shows Copilot posting orders" because it is the hedge
2	**TRIM**	"Part 3 sets out this direction**: clients' AI tools acting on Aladdin under BlackRock's own controls**."	The words after the colon state the thesis for the third time on this page, after the heading and the end of paragraph 1	Part 3 sets out this direction, what would have to be true for it to hold, and four pieces of marketing work that would follow.	Fix 1 lists 11 places the claim appears. This removes one of them
2	**TRIM**	Box: "the 54 API specifications **inside BlackRock's 11 public Python plugin packages (named asdk_plugin)**"	The package count and name are trivia here. The Exhibit 3 note, the Exhibit 5 note and register entry 6 carry them	Public material only: BlackRock web pages, its 54 public API specifications, about 125 recordings, SEC filings, procurement notices, GitHub and PyPI.	None
2	**CUT**	Whole box "**How to read the receipts**" (two sentences plus the P, S and T legend)	This is method detail on the summary page. Its first two sentences repeat About (p15, paragraph 3) almost word for word, and the P, S and T definitions repeat the Sources header (p16)		No source orphaned. About and the Sources header keep it
3	**TRIM**	"put the scale this way **at a LangChain conference** in 2025"	The venue does no work here. Register 9 and the Exhibit 11 source give it	Brennan Rosales, an AI Engineering Lead at BlackRock, put the scale this way in 2025.	None
3	**CUT**	"**The Aladdin organization is "around 7,000 people, with over 4,000 of those being engineers.**""	Headcount colour. Nothing else in the document uses it		Source 9 is cited many times elsewhere
3	**CUT**	"**Its 24 percent rise includes Preqin, the private-markets data firm BlackRock bought in 2025 12.**"	Fix 50 says "Consider skipping". I agree. Do not add the 16 percent figure either. The Preqin purchase is restated on p8		Already in fix 50 (skip it). Source 12 is cited elsewhere
3	**TRIM**	"four platforms **that share one data language**"	"Share one data language" is marketing colour	BlackRock sells Aladdin as four platforms: the Aladdin platform, eFront, Aladdin Wealth and Preqin [source 13].	This is the only use of source 13, so keep the sentence. Fix 40's note ("BlackRock lists four platforms and nine solutions") would then repeat it. Shorten that note to "BlackRock lists nine solutions."
3	**CUT**	Ex 1, Aladdin Wealth: "**, with an AI commentary tool since October 2025 17**"	An AI feature in Wealth plays no part in the argument about Studio and Copilot	Risk analysis and proposals for advisors [source 16]	**Orphans source 17**

3	**CUT**	Ex 1, eFront: "**, with private credit analytics added in May 2026 19**"	Repeats p8 ("Private credit analytics on Preqin followed in May 2026 19")		Source 19 is still cited on p8
3	**CUT**	Ex 1, Data Cloud: "**sold as an add-on to Aladdin Enterprise 21,**"	Packaging detail. Keep "part of Studio 22", which p8 relies on	Managed data on Snowflake [source 20], and part of Studio [source 22]	**Orphans source 21** (AWS release). Also remove "BlackRock AWS release, December 2025 21" from the Exhibit 1 source line. If the author adds fix N2's packaging-and-pricing condition, this is the one sourced packaging fact and could move there
3	**TRIM**	Ex 1, Copilot: "**It gives no investment advice 23**"	A guardrail detail. Exhibit 11 and the p10 box state it with the same source. Keep "available to all Aladdin clients", which finding 3 uses	A chat assistant available to all Aladdin clients [source 23]	Source 23 is cited elsewhere
3	**CUT**	Ex 1, Provider: "**These providers pay BlackRock for it 25**"	Revenue detail that nothing uses	Gives custodians and administrators access to Aladdin	**Orphans source 25** (iShares prospectus). Also remove it from the source line. It is the only sourced hint that a custodian such as JPMorgan may pay as a provider (p7 note, fix 27). Keep it only if the author wants that link stated
3	**TRIM**	"Exhibit 2 follows one trade through Aladdin, **step by step,** as far as..."	Filler	Exhibit 2 follows one trade through Aladdin as far as the 54 public specifications describe it [source 6, 26].	None
3	**CUT**	Ex 2, Trade detail: "**BrokerConfirm RoutingAPI holds where confirms go 6**"	A second API on a step whose point (TradeAPI exists) the API row already makes	(leave the cell blank)	Source 6 is cited elsewhere
3	**CUT**	Ex 2, Lot detail: "**Retrieved from the ledger_a_summary table 6**"	A table name is trivia	(blank)	
3	**CUT**	Ex 2, NAV detail: "**Each valuation carries an exception list 6**"	Fix 19's "Each valuation counts its exceptions. Another call lists them." spends more words on a detail the argument never uses	(blank)	Makes fix 19 unnecessary
3	**TRIM**	Ex 2 note: "The labels in brackets are each specification's stability label**: alpha, beta, stable or sunset**. Exhibit 5 counts them."	The list of four labels repeats the Exhibit 5 note	The labels in brackets are stability labels. Exhibit 5 counts them.	
4	**TRIM**	Ex 3: "such as **Explore,** Dashboard and Risk Radar", the note "**The specifications also name Dashboard and Risk Radar.**", and in the source line "**a training recording, for Explore 27;**"	Explore's only source here is a 2022 third-party YouTube upload (grade T). Fix 13 already removes that source from Exhibit 2. Dashboard and Risk Radar do work in fixes 13 and 33. The note sentence is sourcing and belongs in the source line	Box: About 100 applications, such as Dashboard and Risk Radar. Source line: the public specifications and SDK [source 6, 29], for Dashboard and Risk Radar.	**Orphans source 27**, the weakest source. Explore still appears on p8 (source 70) and in Exhibit 14
4	**TRIM**	Ex 3 Copilot box: "**each tool matches an Aladdin API already in production**"	Said on p2 (fix 2), p9, in the Exhibit 11 title, in Exhibit 14 and on p12. In this map, the box only has to show where Copilot sits	Aladdin Copilot, inside them	Decision 3 redraws this exhibit

4	CUT	Ex 3 Hosting row: "**Microsoft Azure / Amazon Web Services**", with "**the FY2025 10-K, for hosting 12; Microsoft, for Azure 35**"	Which clouds host Aladdin has no bearing on where clients' AI tools connect		**Orphans source 35** (Microsoft blog). Source 12 is cited elsewhere
4	TRIM	Ex 3 Outside inputs: "**, and vendor data such as prices and ESG research**" and "**data vendors, ICE and Sustainalytics 36, 37**"	Examples of vendor data are colour	The client's own and third-party data, loaded into Data Cloud or through the Data eXchange	**Orphans sources 36 and 37**. Fix 37 and Decision 3 move Data Cloud and ADX inside Studio, so this row may go entirely
4	TRIM	Ex 3 controls panel text: "**Each API has its own OAuth scopes.**" and "**Posting an order runs compliance unless the caller turns it off, and returns any violations.**"	The same sentences appear on p2 and p5, and the note already says "Controls as in Exhibit 14". The headings are enough on the map, and N5 advises against stressing the off-switch	Controls in the API specifications: Access set per API. Compliance by default on orders.	Decision 3 keeps a controls panel attached to Studio
4	TRIM	Ex 3 source line: "Rosales **at 2:35 and 4:31**", "Woodhead **at 4:49**"	Timestamps are register detail. Register 9 does not list 2:35 among Rosales's quoted times, so check that time	Rosales, for the apps and Copilot [source 9] ... Woodhead, for Studio [source 1]	Register 9 (2:35 missing)
4	TRIM	Ex 4 APIs tile: "**Every public specification's ID begins agraph.<domain>, for Aladdin Graph**"	This is evidence, not description, and belongs in a note. Keep "Built on Aladdin Graph", which fix 33 and p12 rely on	Read and write Aladdin data. Built on Aladdin Graph, BlackRock's firm-wide runtime for APIs and events.	Move the agraph evidence to the Exhibit 5 note (see p5). Decision 3 renames the tile "API access"
4	CUT	Ex 4 Events tile: "**Events run on the same Aladdin Graph runtime.**"	Repeats the APIs tile ("runtime for APIs and events")		Keep "No event specification is public" (hedge, fix 44 wording)
4	TRIM	Ex 4 SDK tile (fix 20 wording): "**, with login and retries built in**" and "**A BlackRock plugin builder generates its 11 plugin packages from the specifications**"	These describe how the SDK is built, which the argument does not need	Open-source Python library with typed clients for the APIs and a Snowflake connection for Data Cloud.	Already in fix 20 (judged). Source 40 is still cited in Exhibit 16
4	CUT	Ex 4 Data Cloud tile: "**, with Fivetran moving the data**"	Vendor plumbing	A managed data store on Snowflake	Source 28 is still cited in Exhibits 2 and 14
4	TRIM	Ex 4 ADX tile: "**, with standard extracts and loaders**"	Product detail	Bulk file transfer to and from Aladdin	
4	TRIM	Ex 4 workspace panel: "**Studio UI ... Projects ... S3 storage integration ... Studio Compute sessions ... Studio notifications ... ADC Admin Center**"	Product-manual detail. The argument and fix 8 ("credentials registered in Studio") need only the credentials	Inside a client's Studio workspace: API tokens and OAuth applications, the sign-in for the APIs, set up in Studio's screens.	No source orphaned (6 and 29 are cited elsewhere). Agree with fix 61: do not add Spaces. Exhibit 16 and p14 gloss Studio Compute themselves
4	CUT	Ex 4 note: "**I read Studio Compute sessions as the SDK's name for Aladdin Compute.**"	Fix 58 says "Consider skipping", and the note is moot once the workspace items go		Already in fix 58 (skip it)
5	TRIM	Ex 5 title: "**Two domains hold 127 of the 301 public API operations**"	No other part of the document uses "127 in two domains". The 301 total (fix 33) and the presence of order, trade and compliance APIs are what the thesis uses	The 54 public specifications hold 301 operations, including orders, trades and compliance rules	Fix 33 uses 301

5	TRIM	Ex 5 source: "inside the 11 asdk_plugin packages, **version 2.0.0b3,** on PyPI 6"	The version and package name are register detail (entry 6)	Source: the 54 public specifications on PyPI [source 6]. Counts are mine, recomputed from the files.	
5	TRIM	Ex 5 note: "four utility APIs **(token, subscription, notification and a demo)**, not counted here"	The exclusion keeps the count honest. The list inside the brackets does not	The core aladdinsdk package adds four utility APIs, not counted here.	
5	CUT	Ex 5 note: "**The 54 specifications span 11 domains and 11 PyPI packages.**"	Repeats the p2 box, the Exhibit 3 note and the table's own rows		
5	TRIM	Ex 5 note: "Domain names are BlackRock's own, taken from each specification's id."	Keep, and give it the agraph evidence moved from Exhibit 4	Domain names are BlackRock's own, taken from each specification's id, which begins agraph.<domain> for Aladdin Graph.	Receives the text moved from the Exhibit 4 APIs tile
5	CUT	"**Some operations take time to finish. Ten specifications offer a way to track them, and 35 operations are marked long-running 6. The SDK checks back on these operations at set intervals 29.**"	API mechanics, not a control. Fix 43 says "Consider skipping". Cutting it also removes the 35 versus 25 error		Already in fix 43 (skip it). Sources 6 and 29 are cited elsewhere
5	CUT	"**Risk exceptions record both the date a record is valid and the time it entered the system. A Data Cloud dataset carries a flag that says whether it is bitemporal 6.**"	Data-model detail that no other part of the document uses		
5	TRIM	"Every request carries an application key and a **second credential. The second credential is** an OAuth 2.0 token, a client key, or a user name and password 6."	The credential types matter, because "acting for each user" (fix N7) needs a sign-in for each user. The two sentences can be one	Every request carries an application key and a credential, which is an OAuth 2.0 token, a client key, or a user name and password [source 6].	
5	CUT	"**A typical OAuth scope reads trading.order_management.order.v1.Order:read 6.**"	The raw scope string adds precision nobody uses. p12's "the same Order:write scope" (fix 6) is clear without it		
5	CUT	"**I pulled about 125 recordings.**"	Method detail. Repeats the p2 box		
5	TRIM	"Five BlackRock speakers in them describe Studio or its parts 1, 22, 41, 46, 47."	Needed, but the count changes if the Miller row goes (see p6)	Four BlackRock speakers describe Studio or its parts in recordings [source 1, 22, 41, 46].	Depends on the Miller cut. Source 47 then orphaned
5	TRIM	"Exhibit 6 lists each **with the title the recording gives**."	The column heading and the Sources header already say this	Exhibit 6 lists them.	
5	TRIM	"BlackRock's own definition comes from the head of Studio engineering**, on Snowflake's podcast in November 2025**."	The venue and date are repeated in the attribution line under the quote and in Exhibit 6	BlackRock's own definition comes from the head of Studio engineering.	
6	TRIM	"— Dave Woodhead, **Managing Director and** Head of Engineering for Aladdin Studio, Snowflake Data Cloud podcast, **published November 11,** 2025 1"	The full title and exact date sit in the Exhibit 6 row directly below and in register 1. The em-dash breaks the rules	Dave Woodhead, Head of Engineering for Aladdin Studio, Snowflake Data Cloud podcast, November 2025 1	Em-dash covered by fix N11

6	CUT	Ex 6, whole **Miller row** ("Data Cloud replaced "flat files ... FTP and related transfers"")	This is about Data Cloud replacing file transfer, not about what Studio is. Exhibit 7's note already drops him for that reason. Fix 21 shows the claim needs correcting anyway, because ADX still does file transfer		**Orphans source 47**. Makes fix 21 unnecessary. Change "Five" to "Four" on p5 and in the Exhibit 6 title
6	TRIM	Ex 6, Woodhead: "Gives the three-part definition quoted above"	Repeats the quote above	(absorbed by the merged exhibit, see larger passages)	
6	TRIM	Ex 6, Goel: "**; Data Cloud "within 15 minutes of latency""**	Precision nobody uses. Exhibit 7 already has "a near real time data store"	Aims for every transaction "via an event, via an API"	Already in fix 39 ("Aims for:"). Source 41 is still cited
6	TRIM	Ex 6 note: "**Three of the five** transcripts are machine-made"	Keep the hedge, but the count is wrong. By register entries 1, 41, 46 and 47, and by Exhibit 7's own counting (auto-captions count as machine-made), it is four of five	(after the Miller cut and merge) Quotations are verbatim. Three of the four transcripts (Khara, Goel and Woodhead) are machine-made, as marked in Sources.	Register 1, 41, 46, 47
6	CUT	"**Newman calls the Data Cloud and the analytics APIs part of Studio 22. Goel says every transaction should be available to clients through an event or an API. He also describes Data Cloud as a near-real-time data store 41. Khara calls Studio programmatic access to data and reporting 46.**"	Each sentence restates the speaker's cell in Exhibit 6 and the quote in Exhibit 7. Each point is made three times on one page		Sources 22, 41, 46 are still cited in the exhibits
6	CUT	"**The role is a product director for Aladdin Studio Developer.**"	Job-title trivia. Register 48 gives it		
6	TRIM	Exhibit 7 as a separate exhibit	It repeats Exhibit 6's speakers, dates and points, adding only the quotes and a "Parts they name" column	Merge into one exhibit (see larger passages)	Renumbers Exhibits 8 to 17 and every cross-reference
6	CUT	Ex 7, Goel: "**; exposing "the software and application that we're building""**	A third Goel fragment that names no Studio part, so it does not feed the "Parts they name" column		
6	CUT	Ex 7 note: "**Miller, in Exhibit 6, speaks only about Data Cloud replacing file transfers, so he is not shown.**"	Moot once the Miller row goes		Fix 21 would otherwise edit it

Part 2 (pages 7 to 11)

p	Verdict	Text to cut or trim	Why it is extra for the overall point	Clean replacement	Dependencies
7	TRIM	"He was then chief executive of Royal London Asset Management."	The title does work (a chief executive's endorsement is the kind of reference a case study needs), but it does not need its own sentence.	"In a BlackRock client video, Hans Georgeson, then chief executive of Royal London Asset Management, praises the Snowflake implementation in Royal London's Aladdin program [source 50]."	50 is also used in Exhibit 16.

7	**TRIM**	"report Aladdin payments of $4.4 million to $7.6 million a year from 2017 to 2023, then $14.7 million in 2024 and $25.6 million in 2025"	Repeats Exhibit 8 bar by bar on the same page. The text needs only that the payments run every year and reached $25.6 million.	"JPMorgan Chase's proxy statements report payments to BlackRock for Aladdin in every year since 2017, reaching $25.6 million in 2025 51, 52."	Exhibit 8 note's "the figures in the text start with 2017" depends on this (already removed in fix 27).
7	**TRIM**	"in the third quarter of 2025" and "\"a complex, multi-year initiative\""	The quarter is precision nobody uses. The quote is colour, and it reads as a warning about effort rather than as proof of commitment.	"Janus Henderson's 10-K says the firm chose in 2025 to move its investment management system to Aladdin [source 53]."	Only use of 53, which stays cited.
7	**CUT**	Exhibit 8 grey 2016 bar and legend item "Payment for integration services (2016 only)"	A different kind of payment that needs its own legend entry and note to explain. It adds nothing to "rose and stayed".	Start the chart at 2017 and drop the legend.	Fix 27 already removes the note sentence that explains the bar, so the bar would be left unexplained. Update the Exhibit 8 aria-label in the HTML ("1.5 (integration services)").
7	**CUT**	"The grey 2016 bar is a payment for integration services; the figures in the text start with 2017."	Explains a bar that serves no point and cross-refers to text figures. Also breaks the semicolon rule.		Already in fix 27. Goes with the 2016 bar cut.
7	**CUT**	"The report is not a JPMorgan or BlackRock document."	Sourcing detail. The register already grades 54 as T (third party).		Already in fix 27.
7	**CUT**	Fix 27 proposed: "Disclosed because BlackRock owns more than 5 percent of JPMorgan."	Background on why the payments are public. It does not help show that a client uses Aladdin, and it points the reader at a related-party angle that the head of go-to-market advised leaving out.	Fix 27 note without its first sentence: "The proxies do not say which Aladdin services the payments cover. A 2016 trade press report says JPMorgan was connecting to Aladdin for its custody clients [source 54]."	Judges the fix 27 wording.
7	**CUT**	"One rewrites web addresses and one adds custom headers."	Technical detail. "Both help firms that send Aladdin calls through their own enterprise gateway" already says what matters.		The two underlined links (56, 57) stay cited in the next sentence, in Exhibit 14 and in Exhibit 16.
7	**TRIM**	"who co-wrote the SDK's launch post"	Proof that the reviewer works at BlackRock. It is a receipt, not a point, so the register can carry it.	"A BlackRock Aladdin Studio engineer accepted both into the SDK [source 38, 56, 57]."	Keep citing 38, because it shows the engineer's role. 38 is also used in Exhibit 4.
7	**CUT**	Exhibit 9 PPF row: "at up to £74.0 million, against the fund's estimate of up to £55 million 58, 59"	The comparison of price with estimate does not serve "chose Aladdin". It invites a question about price that the document does not answer.	"BlackRock won both parts of the tender [source 58]"	Orphans 59 (the contract notice with the estimate). Makes fix 47 ("over ten years") moot.
7	**CUT**	Exhibit 9 PBGC row: "at about the same yearly price"	The renewal in 2017 and 2023 shows the buyer stayed. The price detail is extra.	"BlackRock won an investment risk system contract both times [source 62], 63"	Fix 48 changes this to "at the same yearly price". Judged: still extra.

7	TRIM	Exhibit 9 note: "The PPF notice gives BlackRock's Aladdin web page as the supplier's address 58."	Evidence that the BlackRock award is an Aladdin award. That is a sourcing detail, so it belongs in register entry 58.	Note: "Source: UK Find a Tender [source 58, 60]; Nest [source 61]; USAspending.gov [source 62, 63]." Add to register 58: "The notice gives BlackRock's Aladdin web page as the supplier web address."	Fix 47 rewords this to "supplier web address". Move it rather than reword it. Drop 59 from the note if the PPF price is cut.
8	CUT	"Proof from one firm counts even when the buyer is a different kind of firm."	An unsourced assertion that pre-empts an objection (pension proof for an asset-manager buyer). Fix 26 drops "public pension funds" from the next sentence, so the objection is no longer raised here.		None.
8	CUT	"Some clients are easier to name in public: public pension funds, and firms whose filings or tenders already name BlackRock. They are the natural first subjects for a Studio case study that names the client."	The second sentence repeats the direction box just below almost word for word. The first sentence only gives the reason for the box.	Move the reason into the box (next row).	Already in fix 26 ("Firms whose filings or tenders already name BlackRock are easier to name in public as Aladdin references."). Judged: even reworded, it still repeats the box.
8	TRIM	Direction box 1: "A Studio case study that names the client can start with clients whose Aladdin use is already on the record."	On point. It absorbs the reason from the cut sentence.	"A Studio case study that names the client can start with firms whose filings or tenders already name BlackRock, because they are easier to name in public."	Box heading uses "suggests" (Decision 5). Exhibit 15 row 3 (fix 26) relies on this box.
8	CUT	"BlackRock tells investors that API calls will grow fastest, without naming the product behind them."	A topic sentence that repeats the heading and the next two sentences. Fix 45 drops "fastest", which leaves nothing new in it.		Fix 45.
8	TRIM	"forecast four usage measures to 2030. API calls across BlackRock and Aladdin had the fastest forecast growth, 17 times"	"Four usage measures" and "fastest" are precision that only a "fastest of four" claim uses, and fix 45 drops that claim. The 17x figure is also on p2, in the p9 box and on p12.	"At its 2025 Investor Day, BlackRock estimated that API calls across BlackRock and Aladdin would grow 17x by 2030 11."	Fixes 7 and 45. This is the right single home for 17x in Part 2, because the p9 box should not repeat it.
8	CUT	"Fees can also depend on subscriptions, client launches (go-lives) and support."	A list of other fee terms that nobody uses. The point is only that API calls are not among them.	Paragraph end: "BlackRock's 10-K says technology services fees are generally set by the value of positions on the platform or at a fixed rate. It does not list API calls among its fee terms [source 12]."	Keep the 10-K point. It supports the pricing and packaging condition on p12 (fix N2).
8	TRIM	Exhibit 10 Studio cell: "Never on a call. The only investor-facing mention found is one line on a 2023 Investor Day slide 65"	Repeats the sentence directly above the exhibit. The other zero rows just say "Never".	"Never"	65 stays cited in the text.
8	CUT	Exhibit 10 Data Cloud cell: "where it was described as an add-on sold with Aladdin Enterprise"	The row needs the count and where it came up. How the product is sold repeats Exhibit 1.	"Q3 2022 66 and Q4 2024 67"	Fix 46 rewords it. Judged: still extra.
8	CUT	Exhibit 10 row "Citizen developer, 0, Never"	A zero for a term that is neither Studio nor AI. It does not serve the finding or the thesis.		Fix 42's "All six terms were recounted" becomes five.

8	**TRIM**	Exhibit 10 note: "The non-zero counts total four mentions in six and a half years, and are approximate. A zero means the term appears in no transcript."	The total is arithmetic the table already shows. The hedges (approximate, zero means none) are needed and can be said in fewer words.	"The tally is mine. Zeros mean the term appears in no transcript. The other counts are approximate."	Fix 42 changes "six and a half years" to "nearly seven years". Judged: the total is still extra.
8	**TRIM**	"Much of the private-markets data BlackRock has been adding reaches clients through Data Cloud and Explore."	The one on-point idea in the paragraph.	Whole paragraph: "BlackRock's private-markets data is reaching clients through Data Cloud. Preqin indices \"are also available today in Aladdin Explore and our Aladdin Data Cloud capabilities\", BlackRock's private markets team said in September 2025 70. Newman, the Studio general manager, names eFront and Preqin data among the data being added to Data Cloud [source 22]."	If fix 7's new box is adopted, nothing in Finding 2 uses this paragraph. See the larger-passages section.
8	**CUT**	"BlackRock bought eFront in 2019 and Preqin in 2025."	Background. The Preqin purchase is already on p3, and the eFront date has no citation here.		83 (eFront acquisition) is cited only on p12, for a different claim. Check that citation.
8	**CUT**	"In September 2025 its private markets team described what the two deals brought clients, on a client webinar 70."	Method detail. The date moves into the replacement above.		70 stays cited in the replacement.
8	**CUT**	"Investors \"now have access to over 15,000 fund investments within eFront Insight\" for benchmarking."	eFront Insight is not Studio. The number does no work.		
8	**CUT**	"More than 10 new transaction types were added to Aladdin (\"over 10 different transaction types\"). They cover commitments, fundings, paydowns and payment in kind (PIK). So Aladdin now records private credit loans directly."	Product trivia about Aladdin's core, not Studio or the investor story. It also states the same count twice.		
8	**CUT**	"The team said it designed its private credit data model with BlackRock's own professionals and \"our new colleagues from HPS\" 70. HPS is the credit investment manager BlackRock bought in July 2025 12."	Colour and acquisition history.		12 is used widely.
8	**CUT**	"Private credit analytics on Preqin followed in May 2026 19."	Repeats the Exhibit 1 eFront row ("with private credit analytics added in May 2026 19").		19 stays cited in Exhibit 1.
9	**CUT**	Direction box 2 (v23): "It projects API calls across BlackRock and Aladdin to grow 17x by 2030 11. That is the fastest of the four forecasts it showed investors 11. Its new eFront and Preqin private-markets data is going into Data Cloud, which is part of Studio 22."	Restates the body (17x, fastest of four, Data Cloud) and states no direction.		Already in fixes 7 and 45.

9	TRIM	Fix 7 proposed box: "BlackRock tells investors it is 'empowering clients with data and APIs' and lists 'Aladdin as a platform' among Aladdin's growth drivers. Studio is the product clients use to build on Aladdin."	New evidence placed in a direction box, and still no direction. The two quotes belong in the body.	Body (after the 17x sentence): "BlackRock also tells investors it is \"empowering clients with data and APIs\" and lists \"Aladdin as a platform\" among Aladdin's growth drivers [source 11]." Box: "BlackRock could name Studio as the product behind \"Aladdin as a platform\" when it speaks to investors."	Judges fix 7. Fix 7 adds slides 33 and 35 to source 11.
9	TRIM	"It draws on a registry of plugins built by Aladdin's engineering teams. The speakers put it at a \"couple of thousands agents and tools\" 9."	The count matters to the thesis (fix 3 makes scale BlackRock's edge). The quote appears again in the Exhibit 11 title and box 2 just below, so the text can use the plain number.	"It draws on a registry of about two thousand tools and agents built by Aladdin's engineering teams [source 9]."	
9	TRIM	"Teams add to the registry in two ways. The first is \"to define a tool as kind of mapping one-to-one to an existing Aladdin API already out in production\" 9. The second is to register an agent of their own 9."	The tool-to-API mapping is the fact the thesis rests on. The "two ways" framing and the agent route are side detail.	"A team can define a tool \"mapping one-to-one to an existing Aladdin API already out in production\" [source 9]."	
9	TRIM	Fix 33 proposed: "The public APIs are Aladdin Graph APIs, and some back BlackRock's own screens, such as Risk Radar. Copilot's tools map to Aladdin APIs already in production. Whether those include the public APIs is not public. Copilot draws on about two thousand tools and agents, and the public specifications hold 301 operations, so many of Copilot's tools likely sit on APIs clients cannot call."	"The public APIs are Aladdin Graph APIs" repeats Exhibit 4. "Copilot's tools map to Aladdin APIs already in production" and "Copilot draws on about two thousand tools and agents" repeat the two sentences before.	"Some public APIs back BlackRock's own screens, such as Risk Radar. Whether Copilot's tools include the public APIs is not public. The public specifications hold 301 operations, far fewer than Copilot's tools and agents, so many of Copilot's tools likely sit on APIs clients cannot call."	Judges fix 33.
9	TRIM	"On BlackRock's podcast, Microsoft's Adrian Crockett said firms building their own copilots need plugins: \"There's no copilot without plug-ins\" 71."	A Microsoft speaker's general claim. The same exchange holds the stronger, BlackRock-voiced line that fix 9 puts in the Exhibit 14 note. Two quotes from one exchange is one too many.	"On BlackRock's podcast in November 2024, asked about clients using BlackRock's plug-ins in their own copilots, BlackRock's Head of Product for AI said, \"we are hearing that from our clients\" [source 71]."	Fix 9. Use this quote once. Here is the better home, because Finding 3 is where the evidence sits. Then drop it from the Exhibit 14 note. 71 stays cited.
9	CUT	"On the data side, a BlackRock product leader says the team is making sure \"the data model itself is structured for agentic use cases\" 72."	About the data model, not access by outside AI tools. P12 already uses the same source for the same point.		72 stays cited on p12.
9	TRIM	Exhibit 11 box 1: "the open app, portfolio and widgets go in with it"	Interface detail.	"One question, with the user's screen as context. The talk's example is \"what is my exposure to aerospace in Portfolio 1?\" [source 9]"	Keep the example question. Fix N9 (optional) relies on it.
9	CUT	Exhibit 11 box 2: "from \"50, 60 Aladdin engineering teams\""	A number nobody uses. It is repeated in Exhibit 14 ("from 50 to 60 BlackRock teams").	"About two thousand registered tools and agents: a plugin registry holding \"couple of thousands agents and tools\" [source 9]"	Also cut "from 50 to 60 BlackRock teams" in Exhibit 14 (fix 11 redraw).

9	CUT	Exhibit 11 box 3: "More than \"40, 50 tools\" would hurt performance 9"	Engineering trivia. Filtering by environment, user group and app is the part the thesis uses (registry rules).	"20 to 30 tools shortlisted: Copilot filters the registry by environment, user group and app, leaving \"say, 20 to 30 tools and agents\" [source 9]"	
9	TRIM	Exhibit 11 box 4: "uses GPT-4 function calling to" and "The talk describes a loop \"over a planning and action node\" 9."	The model name is a dated detail that does no work. The loop quote repeats "calls them, and repeats".	"Plan and call the APIs: Copilot plans which tools to call, calls them, and repeats until it can answer. Output guardrails then check the answer for hallucinations [source 9]"	Fix 31 adds an input guardrails step and "as of the May 2025 talk". Keep both, because the date is a needed hedge.
9	CUT	Exhibit 11 box 5: "The team tests every rule in its system prompts 9"	Repeats Exhibit 14's AI-graded tests. Not part of answering a question.		Already in fix 31.
9	CUT	Exhibit 11 note: "Quotes come from a machine transcript of the talk, marked as such in Sources."	Sourcing detail already in register 9 ("machine transcription") and in p2's limitations.	"Source: Rosales and Valdez at LangChain Interrupt 2025 [source 9]; the Copilot page [source 23]. The tool counts are the speakers' own estimates."	
9	TRIM	"Six data and cloud providers offer a connector or an MCP server. Four system-of-record rivals have announced AI features or AI access to their data. Many of the 11 offer an MCP (Model Context Protocol) server, a standard way for outside AI tools to connect."	Two counts, then a vaguer third ("Many of the 11") that repeats them. The MCP definition is needed, because this is its first use.	"Exhibit 12 lists what the 11 providers I chose to compare have made public about AI access. Eight of the 11 offer outside AI tools a connector or an MCP (Model Context Protocol) server, a standard way for outside AI tools to connect."	Fix 16 ("Update the page 9 counts to match"). Fix 16's title carries the rivals' point.
9	CUT	"Its only public mention of MCP is a job posting 73."	A job posting is not product evidence, and the same posting appears in the Exhibit 12 row and the Exhibit 12 note (three mentions in two pages).		Fix 14 replaces it with "BlackRock has published no MCP server or AI connector for Aladdin.", which nearly repeats fix 8's "BlackRock has published no guide or connector for AI tools." Keep only fix 8's sentence. Fix 9 says to keep the posting on p9, which conflicts with fix 14. With fixes 9 (Exhibit 14 note), 14 and 17 applied and this cut, 73 is orphaned.
9	CUT	"LSEG had 90 customers connected to its MCP server by April 2026 74."	Repeats the Exhibit 12 LSEG row word for word on the facing page.		74 stays cited in Exhibit 12.
10	CUT	Exhibit 12 FactSet: "and calls it the first in its market"	FactSet's marketing claim. It does no work in the comparison.	"FactSet runs an MCP server for its data"	3 stays cited. Fix 34 rewrites rows, so apply this cut to the analyst's wording.

10	CUT	Exhibit 12 note: "Aladdin has only a job posting that mentions MCP 73."	The third statement of the same fact (row, note, p9 body).		Fix 14 rewords it to "BlackRock has published no MCP server or AI connector for Aladdin". With fix 17's row, that would also be a repeat. Cut it rather than reword it.
10	TRIM	"37 percent said they run \"mostly vendor platforms,\" 30 percent run a \"hybrid,\" 18 percent are \"actively reevaluating,\" and 15 percent are \"mostly built in house\" 10."	Repeats the left panel of Exhibit 13 number by number. The heading already gives the summary (two thirds).	"The first poll asked where firms sit today. Exhibit 13 shows the answers [source 10]."	
10	CUT	"; cost and speed to market tied for second"	The runner-up does no work. Only the AI lead is used (p12). It also breaks the semicolon rule.	"The second poll asked what is driving the build-or-buy decision. \"AI and data demands\" led at 42 percent [source 10]."	Fix N11 (p10 semicolon).
10	CUT	"The third poll asked what they would stop maintaining in house. 53 percent chose compliance reporting 10."	Not used by the direction box, Part 3 or Exhibit 15. Compliance reporting is not the thesis's compliance (checks on orders).		Goes with the Exhibit 13 right panel. 10 is used widely.
11	CUT	Exhibit 13 right panel "What firms would stop maintaining in house" (poll 3) and title words "and would stop maintaining compliance reporting in house first"	Off-point (see the p10 row). Poll 2, the one the argument uses, is not charted at all.	Title: "Two thirds of webinar attendees run mostly vendor or hybrid platforms"	Fix 55's title change becomes moot. Keep fix 55's hedge in the note. Update the HTML aria-label for the poll 3 chart.
11	TRIM	Exhibit 13 note: "read out on the Build vs. Buy webinar, from the replay's published captions"	Method detail already in register 10 ("published captions").	"Source: Build vs. Buy webinar, poll 1 [source 10]. Respondents to a BlackRock webinar. Number not given."	Takes in fix 55's hedge, which should stay.
11	CUT	"They want \"that backbone foundational data that supports both publics and privates workflows\" 10."	A data point about public and private markets that the argument does not use.		
11	TRIM	"She called a \"really defined system of work\" the other layer that is \"almost equally important\" 10. By that she meant integrated workflows across portfolio management, trading, operations and compliance, governed by operational controls and run on the same data 10."	The controls idea serves the thesis. The paraphrase that lists the functions is extra.	"She called a \"really defined system of work\", with workflows governed by operational controls, the other layer that is \"almost equally important\" [source 10]."	
11	TRIM	"SimCorp announced wins at AllianceBernstein in February 2026 and Pictet in May 2026. AllianceBernstein keeps its \"specialized in-house technology,\" and Pictet connects its own tools to SimCorp One by API 80, 81."	A second example where one is enough. Pictet's API point is the one closest to Studio.	"Rivals sell the same model, a core platform with the client's own builds on top. Pictet chose SimCorp One in May 2026 and connects its own tools to it by API [source 81]."	Orphans 80.
11	CUT	"BlackRock's own August 2026 insight page says the same: \"Build vs buy is no longer a binary question\" 82."	A third voice for a point that Sewdass already made for BlackRock on the same page.		Orphans 82.

Parts 3 and 4, and About this document (pages 12 to 15)

p	Verdict	Text to cut or trim	Why it is extra for the overall point	Clean replacement	Dependencies
12	CUT	"It sells Aladdin as the system it runs internally 9, 83."	Repeats p3 ("the investment platform BlackRock built for itself") and Exhibit 1 ("the same one BlackRock runs internally 9"). It backs the v23 "same controls as BlackRock's own business" wording that fix 1 retires. Under the v24 thesis (the tools Copilot uses, each user's permissions), it no longer supports anything. The two speaker quotes that follow carry "BlackRock has said parts of this" on their own.		Orphans source 83 (eFront acquisition release). Its only citation is here. Remove 83 from the register or re-cite it. Fix 1 changes the sentence before it.
12	TRIM	"SimCorp and Clearwater have announced AI agents, Arcesium an AI platform, and others will likely follow 7, 8, 76."	Already in fix 3. Fix 3 already names the same rivals in detail on p2, and Exhibit 12 lists them again. Fix 3's p12 version then adds Arcesium's May 2026 details, which makes p12 a third full rival list. Those details are also not yet confirmed (Decision 6). "and others will likely follow" is a forecast with no source.	"SimCorp, Clearwater and Arcesium have announced AI agents or AI platforms [source 7, 8, 76]." Do not add the May 2026 Arcesium detail on p12.	Already in fix 3 and Decision 6. No orphans: 7, 8 and 76 are cited on p2 and p9.
12	TRIM	Proposed fix 6 wording: "If the caller sets a time limit and the check runs over it, the order posts with the status Compl Pending." and "either option"	The v23 text ("The caller can turn it off 6. Whether turning it off needs a separate permission is not public.") is already in fix 6. The proposed fix 6 adds an edge case, the time limit and "Compl Pending" status, that nothing else in the document uses. It also turns one open question into "either option". The scope sentence and the authorization sentence in fix 6 do serve the point.	"Posting an order runs a compliance check by default. The caller can skip that check with the same Order:write scope it uses to post. Whether an Aladdin permission restricts skipping the check is not public. A portfolio manager authorizes each order before a trader works it, and the public order API has no call to authorize one."	Already in fix 6. The off-switch appears six times in v23: p2, p5, Exhibit 2, Exhibit 3, Exhibit 14 and Exhibit 15 row 4. Keep it on p2, in this paragraph and in Exhibit 14. N5 removes it from Exhibit 15.
12	CUT	"Copilot's guardrails are tested daily 9."	Already in fix 52, which rewords it and moves it. Under v24, the text only has to say that Copilot's guardrails, planning and tests stay inside Copilot (Decision 2). How often they are tested is detail the argument does not use. The Exhibit 14 "AI-graded tests" box and Exhibit 11 already give it.		Already in fix 52 (I would cut it rather than move it). Source 9 is cited throughout.
12	CUT	"A client's AI tools would work under controls BlackRock already relies on for its own business."	Restates sentence 2 of paragraph 1 on the same page, and p2. It also carries the "own business" wording that fix 1 retires.		Fix 1 (all 11 places).
12	TRIM	"Buyers say AI is changing what they build. "AI and data demands" led BlackRock's webinar poll at 42 percent as the reason firms are rethinking what to build and what to buy, and buyers now ask about APIs and connectors in RFPs 10."	Repeats the p2 executive summary ("Buyers of investment software say AI is changing what they build"), the p10 poll with the same 42 percent, and the p11 RFP quote. Restating the percentage adds nothing. One clause pointing to Finding 4 is enough.	"At BlackRock's webinar, buyers named AI and data demands as the top reason to rethink what to build and what to buy [source 10]."	Repeats p2, p10 and p11. Source 10 is used widely.
12	TRIM	"and it gives no sample size"	Method detail. Fix 55 already puts "Number not given" in the Exhibit 13 note, which is where it belongs. The first half of the sentence is the hedge that matters.	"The poll did not ask whether clients want AI tools that act on Aladdin."	Fix 55.

12	TRIM	"The client base is large. BlackRock serves hundreds of Aladdin clients in 70 countries 9, and its technology services revenue was $2.0 billion in 2025 12."	Repeats p3 almost word for word (the Rosales quote and the revenue line). The addressable-market figure and the 17x forecast that follow size the opportunity on their own.	"The market is large."	Sources 9 and 12 are cited on p3. No orphans.
12	CUT	"A 2026 job posting for Aladdin Graph, the team behind the API layer, says it builds for BlackRock and over 200 institutions that rely on its technology 39."	A third measure of the client base, from a job posting.		Already in fix 51. Source 39 stays cited in the Exhibit 4 note. No orphan.
12	TRIM	"How many of those institutions run their own AI tools is not public."	Hedge. Once fix 51 removes the job posting, "those institutions" refers to nothing.	"How many clients run their own AI tools is not public."	Depends on fix 51.
12	TRIM	Title: "How a client's AI tools would connect is not public."	Said four times on one page: in the text, in the title, in the hatched box and in the note ("The hatched box is not"). The hatched box and the legend are enough.	"Exhibit 14. BlackRock's apps, Copilot and client code share Aladdin's APIs and controls."	Fix 8 changes the claim. Fix 11 redraws the exhibit.
12	CUT	"Explore, Dashboard, Risk Radar and the rest draw on Aladdin's shared services."	Exhibit 3 already gives the app names. "About 100 BlackRock applications" is all this exhibit needs.		Exhibit 3 (p4) keeps the names.
12	CUT	"from 50 to 60 BlackRock teams"	Trivia. Exhibit 11 already has it.		Exhibit 11.
12	CUT	"Nearest public sign: a job posting naming MCP."	Already in fix 9. Also repeated in the note and on p9.		Already in fix 9. Source 73 stays on p9.
12	CUT	"Each client reads its own Data Cloud, which BlackRock runs on Snowflake."	The exhibit's point is the controls a caller of the APIs works under. Data Cloud on Snowflake is off that point and is already stated on p2 and in Exhibits 1, 3 and 4. It also forces a caveat into the note.		Decision 3 puts Data Cloud in Exhibit 3, which is the right home. Cut together with the note sentence below and its sources.
12	TRIM	"(“LLM judges”)"	Jargon in brackets that restates "AI models".	"AI models test every system prompt daily and on every change."	
12	CUT	Note: "The nearest public sign is a September 2026 Forward Deploy Engineer posting for Aladdin Data that names MCP and AI agents 73."	Repeats the hatched box and p9.		Already in fix 9. Source 73 stays on p9.
12	CUT	Note: "Data Cloud, storage and the Data eXchange have their own access controls."	This caveat exists only because of the Data Cloud line. Cut it with that line.		Goes with the Data Cloud line.
12	TRIM	Note: "The right-hand controls show how BlackRock governs AI on these APIs today, which is the model a client's own AI tools could follow."	Under v24, Copilot's guardrails stay inside Copilot (Decision 2), so "the model a client's own AI tools could follow" overstates.	"The right-hand controls are Copilot's own and stay inside Copilot."	Decisions 2 and 3, fix 11.
12	TRIM	Note sources: "the Data Cloud launch release 34, ... the Data Cloud page 20, ... and Fivetran 28"	Once the Data Cloud line is cut, these sources support nothing in this exhibit.	Drop sources 34, 20 and 28 from the Exhibit 14 source line.	No orphans: 34, 20 and 28 are all cited on p3 or p4.
13	TRIM	Row 3: "a public pension fund already on record, or a client whose engineers have contributed to the SDK"	Two examples restated from p7 and p8.	Use the fix 26 wording: "One named client that builds with Studio."	Already in fix 26.

13	**TRIM**	Row 4: "Posting an order runs compliance by default, unless the caller turns it off. An order can also be posted as a what-if test 6. In the demo, a portfolio manager approves before anything trades."	The sixth mention of the off-switch, and the wrong one to show a buyer's risk team.	Use the N5 wording: "In the demo, the client's AI tool proposes a rebalance and posts it as what-if orders with compliance on. A portfolio manager authorizes them before a trader works them."	Already in N5.
13	**TRIM**	Row 4: "Sewdass names rebalancing tools as what clients build on Aladdin's APIs 10."	The reason is useful. The name does no work in the table, and p11 already introduces her.	"Clients already build rebalancing tools on Aladdin's APIs [source 10]."	p11. Source 10 is used widely.
13	**TRIM**	"from first hearing about Studio to getting help. For each step it records what is public today and what opens only to qualified prospects and clients."	Restates the exhibit title and the step names.	"Exhibit 16 follows a prospect's engineer through six steps."	Fix 41 changes "qualified" to "after becoming a client".
13	**TRIM**	"with their notebooks and code samples"	The Exhibit 16 "Get help" row already lists these.	"I could not run anything, test what a client receives, or open the catalog and the API guides."	
13	**TRIM**	Hear row, receipts: "client story video 50, ... Woodhead 1, Rosales and Valdez 9"	Three extra examples of something the two series pages and the webinar already prove.	"the Never Done podcast [source 84], the Big Little Questions video series [source 85], webinar replay [source 10], Client Forum page [source 86], Solutions Engineering job posting [source 87]"	No orphans: 50, 1 and 9 are cited elsewhere. Keep 84 to 87. This row is their only use.
13	**CUT**	Read row: "(“Create & automate,” “Make Aladdin your own,” “Align internally & externally”)"	Marketing taglines used nowhere else. Colour. "Dozens of Aladdin APIs" does work, because it contrasts with the 54 specifications in the next row.		
14	**TRIM**	Try row: "an API token or OAuth app “registered via Studio UI”"	The quotation adds nothing that plain words do not.	"Studio Compute (hosted Python), API credentials registered in Studio, and the client's Aladdin address"	Source 29 stays.
14	**TRIM**	Get help row: "SDK changes from outside developers, reviewed and merged by a BlackRock engineer. On the Studio page, “Book a meeting” and “Download the brochure”."	Already in fix 41: "No public support channel", with the code changes moved to Build. In Build, the code changes repeat p7, so keep them short there. The two buttons are not lost: Exhibit 17's call-to-action score cites 14 and 30 in its own source line.	Get help, public: "No public support channel." Build, public, add: "Merges code changes from outside developers [source 56, 57]."	Already in fix 41. Sources 56 and 57 are cited on p7 and in Exhibit 14.
14	**CUT**	Note: "The After qualification column is what those sources say a client receives. I could not test it, because the developer portal opens only after a client login 6, 44."	Repeats the Part 4 text half a page earlier ("it relies on what sources say", "I could not ... test what a client receives").		No orphans: 6 and 44 are cited elsewhere. Keep "Source: the pages and repositories in the Receipt column, read with no account or login, October 2026."
14	**CUT**	"It runs in three modes: “a developer's local machine,” “Aladdin Studio Compute sessions” and a test mode. It keeps a password it asks for in the operating system's credential manager."	Product trivia. Neither sentence bears on public versus client-only, or on the thesis.		The Exhibit 4 note (fix 58) uses the "Studio Compute sessions" name and cites 29 itself. No orphan.

14	TRIM	"Its README shows it is built for firms with strict IT controls. ... It has settings for firms that call “the Aladdin APIs via an enterprise API management platform such as Azure API Management” 29."	The IT-controls point is worth one line. The full quotation and product name are extra.	"Its README shows it is built for firms with strict IT controls. For example, it supports firms that route API calls through their own gateway [source 29]."	Source 29 stays cited.
14	TRIM	"at Aladdin as at Bloomberg, State Street, SimCorp, Clearwater and Arcesium"	Already in fix 15, which keeps the name list. The list reads the table's rows aloud. The Arcesium exception does matter.	"Investment platforms score low because a first API call needs a client relationship. Arcesium is the exception, with a 30-day trial of its Aquata data platform [source 96]."	Already in fix 15. Source 96 is cited in the Exhibit 17 source line.
14	CUT	"LSEG and FactSet come next. FactSet and MSCI allow a first API call only for licensed clients 89, 98."	Reads non-rival rows aloud. No conclusion depends on it.		No orphans: 89 and 98 stay in the Exhibit 17 source line.
15	TRIM	"The sources include BlackRock product pages, investor presentations, SEC filings, a fund prospectus, procurement notices, press releases and job postings. They also include public code and packages on GitHub and PyPI, other vendors' product and developer pages, blogs and trade press. Finally, they include transcripts of recordings and earnings calls in which BlackRock speakers take part."	This page is the right home for method. Three sentences of source types still repeat the p2 limitations box and the register that follows.	"This is an independent analysis compiled from public sources: BlackRock's pages, filings, job postings and recordings, public code on GitHub and PyPI, and other vendors' pages and trade press."	Overlaps the p2 "Limitations of methodology" box.
15	CUT	"Underlined text links to the document behind each fact. Superscripts point to the Sources section, which follows this page and gives each source's grade (P, S or T), title, publisher or speaker, and date where known."	Near word for word repeat of p2 "How to read the receipts", which also defines P, S and T before first use.		Keep the p2 box. Alternatively move the p2 box here and cut p2, but not both.

Kept: items that look extra but serve the argument

p	Text	Why it stays
1	"What public sources show."	Already in fix N1. The proposed "What public sources show, and one direction they point to." is scoping, not an aside
1	"Clients' AI tools could act on Aladdin under the same controls BlackRock uses for its own business."	It is the point. Judge the new wording in fix 1
1	"Independent analysis of public sources, **done with AI agents**. Not produced, reviewed or endorsed by BlackRock."	"done with AI agents" is repeated in the p2 box and About (p15), but it is a disclosure the reader should see before reading. The disclaimer is needed
2	"Many data providers now offer AI tools a way to read their data 2, 3, 4, 5."	Looks like background, but the next sentence depends on it
2	"Access is granted per API, to read or to write."	Core control
2	"An AI tool calling these APIs would work under the same controls."	It is the paragraph's conclusion
2	"Buyers of investment software say AI is changing what they build 10."	This is the only place the summary mentions finding 4

2	"BlackRock has told investors that API calls will grow 17x by 2030 11."	This is finding 2 in one line. In fix 7, "across BlackRock and Aladdin" is the scoping that keeps the claim honest
2	Box: "AI agents gathered them; I checked every fact against its document."	This nearly repeats About (p15, paragraph 2), but it belongs in a limitations box. It also breaks the semicolon rule
2	Box: "Some recordings are machine-transcribed ... I have no internal product context, so some conclusions may be wrong."	Hedges
3	"Aladdin is the investment platform BlackRock built for itself and sells to other institutions."	"Built for itself" is the fact the thesis and p12 ("It sells Aladdin as the system it runs internally") rest on
3	"BlackRock is the biggest user of Aladdin, but we also sell and support hundreds of clients globally across 70 countries."	"Biggest user" supports the thesis. The client count is reused on p12
3	"It maintains "around 100 Aladdin front-end applications" 9."	This is the first sourced statement of the 100 applications that p2, Exhibit 3, Exhibit 14 and p12 rely on
3	"BlackRock's technology services and subscription revenue was $2.0 billion in 2025 12."	It sizes what BlackRock sells. p12 repeats it, and the author could cut it there instead
3	"Exhibit 1 lists eight products sold across them. Studio is the entry point for people who write code 14."	It repeats the Exhibit 1 title, but it is the usual hand-off from body to exhibit and the paragraph's landing point
3	Ex 1, Aladdin: "the same one BlackRock runs internally 9"	The thesis rests on this fact
3	Ex 1, Aladdin Studio: "For engineers, data analysts and code-curious portfolio managers 14"	Backs "for people who write code" and Exhibit 3's "Who builds" row
3	Ex 1, Accounting: "with public APIs for valuations, lots and composites 6"	Sets up steps 5 and 6 of Exhibit 2
3	Ex 2, Order detail: "Test (whatIf) and compliance (runCompliance) 6"	The two controls that Exhibit 15's demo (fix N5) uses
3	Ex 2, Compliance "Who: No one"	Fix 23's wording ("Runs automatically. The owner of each violation resolves it.") serves the controls point
3	Ex 2, stability labels "(stable)", "(alpha)", "(beta)"	They look like precision, but they show that most of the trade path is alpha. This is a fair hedge inside the document, not in the RFP answer (fix 56)
3	Ex 2 note: "and do not say in what sequence steps 4 to 6 happen"	A hedge on the exhibit's own ordering
3	Ex 2 source: "the Explore training recording 27"	
4	Ex 3 "Who builds" row (client engineers, code-curious portfolio managers, data analysts, Excel users)	It repeats Exhibit 1's Studio row, but it is how the map shows Studio's users. Decision 3's client tiles keep it
4	Ex 3 note: "For illustrative purposes only. Every box is named in the sources below."	Scoping
4	Ex 3 note: "The 11 domains are the packages of BlackRock's public software development kit (SDK)."	It defines a term used in the box. The repeat to cut is in the Exhibit 5 note
4	Ex 4 Aladdin Compute and ATX tiles	These are Studio parts by BlackRock's own "Additional Aladdin Studio resources" list
4	Ex 4 Developer Portal tile	Fix 38's "Guides, behind a client login." is lean, and the login fact feeds Part 4
4	Ex 4 Governance tile	The only Studio part about controls. Fix 38 quotes only "access management and usage monitoring"
4	Ex 4 source: "its APIs, ATX and ADX pages, which list Data Cloud, ADX, Aladdin Compute and ATX as "Additional Aladdin Studio resources""	This is the evidence that those tiles belong to Studio
5	Ex 5 "Largest APIs by operations" column	It looks like a list of names, but it is the only place a reader sees Order, Trade, ComplianceRuleAssignment, User and UserGroupPermission. Fix 5's user permissions point draws on these
5	Ex 5 note: "Counts are mine, recomputed from the files."	Scoping

5	Ex 5 note: "Each specification carries one stability label ... The four columns count specifications by label."	Needed for the table. The Exhibit 2 note now points here
5	"They set out several controls. An order can be posted as a test (the whatIf setting). A compliance check runs by default (runCompliance). The response lists any compliance breaches with the order 6."	This is where the controls are stated in prose
5	"Compliance rule assignments move through review states before they are approved 6."	A write named on p2 ("assign compliance rules") carries a human review state
5	"With OAuth, access is granted per API and per action."	Core
5	"Developers get their OAuth client ID and secret from Studio's screens 29."	Fix 8 ("credentials registered in Studio") relies on it
6	Woodhead quote, whole	BlackRock's own definition. Its first sentence ("Aladdin as a platform") also links to fix 7's growth driver
6	Ex 6 titles column	The titles look like detail, but they establish that these are senior executives (grade S) speaking on the record
6	"Khara, Newman, Goel and Woodhead describe ways for clients to reach Aladdin through code."	Needed
6	"Only Woodhead names every part, developer tools included 1."	Needed
6	"A 2026 job posting calls Studio Developer "Aladdin's extensibility layer" 48."	The only BlackRock document calling Studio the layer clients build on
6	"Speakers since 2024 describe Studio as APIs and data access. BlackRock can build Studio's positioning on that shared description."	Needed
6	Ex 7, Khara: "None by name. Programmatic access implies APIs"	This hedge marks the "Parts they name" entry as inference
6	Ex 7 note: "Goel does not use the name Studio."	This hedge matters, because Goel counts as describing Studio's parts
7	"and a full-text search of SEC EDGAR finds no filing that mentions Studio 49"	Looks like method detail, but it is the "I found no" scoping that makes "no named Studio client" honest beyond one web page.
7	"The chart plots each payment in the year it was made."	Looks like method detail, but the source line says the proxies were "filed 2017 to 2026" while the axis runs 2016 to 2025 (2017 to 2025 after the cut above). Without it the dates look wrong.
7	"JPMorgan is also a custodian, so the payments may cover more than a client license."	A hedge the claim needs.
7	"A 2016 trade press report says JPMorgan was connecting to Aladdin for its custody clients 54."	Old, but it is the evidence behind the custodian hedge.
7	"In December 2025 an engineer at a client firm submitted two changes to the open-source SDK 55."	Looks like a dated aside, but this is the only Studio-specific (SDK) client activity in the finding, and the date shows it is current.
7	Exhibit 9 Nest row: "over six other bids"	Shows the win was competitive, which is what makes it proof.
8	"None of this proof names Studio."	A hedge that keeps the finding honest.
8	"It still backs a Studio pitch, because Studio is sold for building custom applications on Aladdin, and a buyer wants to know that another institution built on the platform and stayed."	The link the whole finding depends on.
8	Finding 2 heading: "BlackRock's growth story to investors runs through Studio, but BlackRock rarely names Studio to investors"	
8	"I attribute those API calls to Studio, because the Studio page describes API use 14."	A hedge.
8	"Outside the calls, the only investor-facing mention I found is a single line on a 2023 Investor Day slide 65."	A hedge. It is why the heading says "rarely".
8	Exhibit 10 API and Copilot quotes	The only times an executive came near the thesis.
8	"Newman, the Studio general manager, names eFront data and Preqin among the data being added to Data Cloud 22."	The only sentence that ties private markets to Studio.

9	Finding 3 heading	
9	"Studio \"exposes everything Aladdin knows how to do\" as APIs and events 1. So I infer that Copilot and Studio use the same APIs."	
9	"The tool counts are the speakers' own estimates."	A hedge.
9	"Aladdin has published no such route."	The core contrast.
10	Exhibit 12 title	
10	Exhibit 12 Clearwater: "with more than 800 AI agents for clients"	Looks like precision, but it is the number that makes the scale comparison with Copilot's about two thousand tools fair (fix 3's claim).
10	Exhibit 12 LSEG: "It had 90 customers connected to its MCP server by April 2026"	The only adoption figure for outside AI access. It supports the p12 condition that clients would have to want this. Keep it here only.
10	Exhibit 12 Aladdin row (job posting)	
10	"State Street is not listed because my sources show no AI feature it offers clients."	Accounts for the 11th provider, so the count is fair.
10	Direction box 3	
11	Clark Schafer pull quote, including "Are you using connectors to Snowflake or to Databricks?"	The evidence for box 4. The connector line belongs to the same verbatim quote.
11	"Alisha Sewdass, BlackRock's Head of Aladdin Solutions Engineering, Americas"	Looks like a long title, but her role is what makes this BlackRock's view.
11	"Those APIs let clients build \"their secret sauce rebalancing tools\" on top 10."	Looks like colour, but Exhibit 15 row 4 relies on it ("Sewdass names rebalancing tools").
11	"On AI, she said, \"you need that system of record that underpins anything that AI is built upon.\""	Used on p12.
11	Direction box 4	On point. It ties to Exhibit 15 row 1.
12	"Its speakers have said that the system of record underpins anything built with AI 10, and that the data model is being structured for agentic use 72."	Looks like a repeat of p11 (Sewdass) and p9 (source 72). It is the only evidence for "BlackRock has said parts of this". Gathering the two lines here is what grounds the direction.
12	"I have not seen BlackRock describe Studio this way."	Scoping hedge.
12	"What BlackRock can show is its own use. About 100 of its applications carry Copilot."	Repeats p2, p3, Exhibit 3 and Exhibit 14. This is where the count answers "not unique", so it belongs here.
12	"Each Copilot tool maps to a production Aladdin API. The team that owns each tool sets which user groups can use it 9."	Repeats p2 and p9, and the Exhibit 14 Copilot box. It is the factual base of the v24 thesis, so it stays in the text.
12	"How those tools would connect is not public."	Hedge.
12	"BlackRock sizes Aladdin's addressable market at more than $20 billion 11."	The figure appears only here and sizes the prize for a go-to-market reader.
12	"It projects API calls to grow 17x by 2030 11."	This is the fourth time the forecast appears (p2, p8, p9 box). Here it is the premise of the next sentence's inference, so this is the copy to keep.
12	"My inference is that clients' AI tools, acting through Studio, could become a large source of those calls."	Labelled inference. It is the point of the paragraph.
12	"Three things would have to be true ..." (whole paragraph)	Core to the section.
12	"Route Aladdin calls through the client's own gateway."	Looks like a side detail. It is the client-side control that p7, Exhibit 15 row 1 and the SDK paragraph on p14 rely on.
12	"Capital flows record who approved them."	Looks minor next to orders. Fix 29 adds that capital flows need the user's Aladdin cash permissions, which directly supports "that user's Aladdin permissions".
12	"Any violations are returned."	Looks like detail. It is what lets an AI tool see a breach and stop, so it serves the controls argument.

13	Row 1: "with stability labels" and "Snowflake and Databricks connectors"	Already in fix 56.
13	Row 1: "and how a client routes calls through its own gateway"	Looks like a second technical detail. It answers "can we connect to them", the RFP question this row quotes, and p7 gives public proof for it.
13	"I read everything here from outside, with no client login. So this document cannot confirm what clients see."	Overlaps the p2 limitations box. This is the section's thesis.
13	"I could read the pages, unpack the specifications and read the SDK's code."	Looks like method detail. It is the "could" half of the section's point.
13	"Where this document describes the catalog, the guides or what a client receives, it relies on what sources say."	Hedge that scopes claims made elsewhere.
14	"The SDK is the one piece of Studio a prospect can install before any conversation."	On point.
14	Exhibit 17, "Community or marketplace" column	It barely separates the investment platforms (all score 1), and the text never uses it. It is still a legitimate measure of developer reach, and cutting a scored column changes the method of an exhibit already sent.
14	Exhibit 17 note: "Bloomberg and Clearwater may score lower than they deserve, because some of their pages blocked automated access."	Hedge.
14	"Exhibit 17 puts Studio beside 10 platforms that may compete with Aladdin for certain uses."	Already in fix 36. It is the fact that makes the comparison fair (rivals versus benchmarks).
14	"Studio scores in line with them, but trails Bloomberg and Arcesium on AI connectors (0 against 2)."	On point.
15	"BlackRock did not produce, review or endorse this analysis."	Every page footer repeats it. This is the main statement, and the footer is the repeat.
15	"Facts are as of October 19, 2026, unless an exhibit or a source entry gives another date."	Hedge.
15	"AI agents pulled the pages, unpacked the packages, transcribed the recordings that had no published transcript or captions, and drafted the text. I checked each claim against the document or recording it cites."	p2 says it too. This fuller version belongs here.
15	"BlackRock and Aladdin are trademarks of BlackRock, Inc. or its affiliates. Other company and product names are the property of their owners."	Standard notice.
