Independent analysis from public sources with AI agents. Not produced, reviewed or endorsed by BlackRock.

Executive summary

Clients' AI tools could act on Aladdin under the same controls BlackRock's own business runs on.

Studio is Aladdin's developer and data layer: APIs and events, Aladdin Data Cloud on Snowflake, and developer tools[1]. Many data providers now offer AI tools a way to read their data[2, 3, 4, 5]. Aladdin's APIs also change the book. They post orders and set compliance rules, under each user's permissions and with a compliance check on every order[6].

Letting AI tools act will not stay unique; SimCorp has announced AI agents[7]. What BlackRock can show is its own use. About 100 of its applications and thousands of Copilot tools already call these APIs every day[8]. Buyers say AI is changing what they build, and BlackRock has told investors that API calls will grow 17x by 2030[9, 10]. Part 3 sets out this direction, what would have to be true for it to hold, and four pieces of marketing work that would follow.

What this method can and cannot do

Public material only: BlackRock web pages, the 54 API specifications inside 11 public `asdk_plugin` Python packages, 128 recordings, SEC filings, procurement notices, GitHub and PyPI. AI agents pulled them in about a day; I checked every fact against its document. Some recordings are machine-transcribed, so names and jargon can be misheard. I have no internal product context, so some conclusions may be wrong for reasons I cannot see.

How to read the receipts

Underlined text links to the document behind the fact. Each superscript number points to an entry in Sources, at the end of this document, giving the grade (P, S or T), title, speaker and date.

■ **P** Primary document: a filing, a specification, a web page or press release, a procurement notice, or code on GitHub or PyPI

■ **S** BlackRock speaker on the record, with the name and title as the recording gives them

□ **T** Third-party report: trade press, or a third party's summary of a primary source

Part 1

What the public record shows

Aladdin is the investment platform BlackRock built for itself and sells to other institutions. Brennan Rosales, its AI Engineering Lead, put the scale this way at a LangChain conference in 2025. "BlackRock is the biggest user of Aladdin, but we also sell and support hundreds of clients globally across 70 countries." The organization is "around 7,000 people, with over 4,000 of those being engineers." They maintain "around 100 Aladdin front-end applications"[8]. BlackRock's technology services and subscription revenue was $2.0 billion in 2025, up 24 percent including Preqin, the private-markets data firm bought in 2025[11]. BlackRock sells the platform as one engine with separate entry points, and Studio is the entry point for people who write code.

What BlackRock sells

Exhibit 1. Of Aladdin's eight named products, Studio is the one for people who write code

Product	What it does	Main users
Aladdin	The front-to-back system for public markets, the same system BlackRock runs internally[8]	Asset managers, insurers, pension funds, banks
Aladdin Wealth	Portfolio risk analysis and proposals for advisors. Its AI "auto commentary" tool launched in October 2025, with Morgan Stanley as the first client[12]	Wealth managers and private banks
eFront	A private-fund investment platform covering due diligence through cash flows and reporting. Preqin now sits inside eFront Insight, and private credit analytics were added on Preqin in May 2026[13]	Investors in funds and fund managers
Aladdin Studio	**The developer and data layer. It covers APIs and events, Aladdin Data Cloud, and developer tools. BlackRock calls it "API-first" and names three users: "a professional engineer building new workflow applications, a code-curious portfolio manager extracting investment insights, or a data analyst automating reporting"[14]**	**Client engineers, data analysts, code-curious portfolio managers**
Aladdin Data Cloud	A managed data service on Snowflake that puts Aladdin and outside data in one place. It is sold as an add-on to Aladdin Enterprise[15]. Richard Newman, General Manager, Aladdin Studio, calls it "part of Studio"[16]	Data teams
Aladdin Copilot	A chat assistant "now available to all Aladdin clients" that "will not give investment advice"[17]	All platform users
Aladdin Accounting	Investment accounting and performance. Its public APIs cover configuration, valuations, lots and composites[6]	Asset managers and asset owners
Aladdin Provider	Connects custodians and administrators to a client's Aladdin. The providers pay BlackRock to use it[18]	Custodians and administrators

Source: BlackRock product pages[14, 17, 19]; Amazon press release, December 2025[15]; iShares prospectus[18]; the public specifications[6].

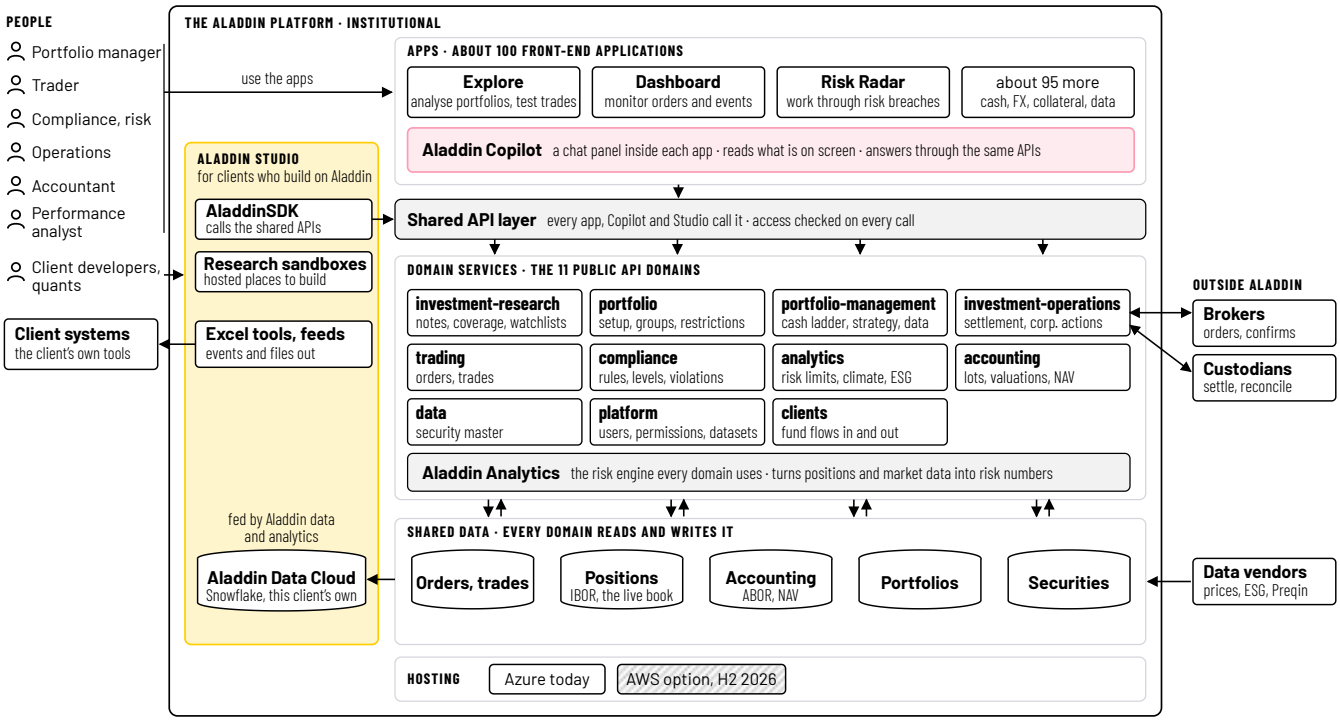

Exhibit 2 follows one trade through Aladdin, step by step, as far as the 54 public specifications describe it[6, 20].

Exhibit 2. The public APIs follow a trade from order to NAV

Step	Who acts	Product or application BlackRock names	API that covers it
1 **Order**	The portfolio manager. An order is "a directive from a portfolio manager to the trading desk to execute a particular investment decision" (Order spec)[6]	The Explore application: its "new what-if model" (Explore classroom recording) compares a changed portfolio with the original before anything is traded[21]	`OrderAPI` v1 (stable). Posting an order takes `whatIf` and `runCompliance`. Its example statuses run "Open," "Compl Pending," "Authorized," "Active," "Booked"[6]
2 **Compliance check**	No one. The check runs automatically when the order is posted, because `runCompliance` is on by default. Any violation then carries an owner, a disposition and a resolution comment[6]	Rules "automatically monitor whether a fund adheres to a regulation, client mandate, or internal guideline" (ComplianceRule spec); no application is named[6]	`ComplianceRuleAPI` and `ViolationAPI` v1 (alpha). Violations are "generated at time of the compliance breach" (Violation spec). A check that times out posts the order as "Compl Pending"[6]
3 **Trade**	The trading desk. Operations then confirms it, because "after a trade is booked in Aladdin, it needs to be confirmed with broker" (BrokerConfirmRouting spec)[6]	Schneid or Shannon of Aladdin Accounting describes the run as going "from that first order through the trade, through all the operation protocols into accounting without lifting up the pencil"[20]	`TradeAPI` v2 (alpha). A block trade carries its per-portfolio trades, plus `confirmedWith` and `confirmedBy`. `BrokerConfirmRoutingAPI` routes the confirm[6]
4 **Position in the IBOR**	The investment team, whose live book is the IBOR, the investment book of record. Richard Newman, Studio's general manager: "It does start with IBOR"[16]	Aladdin Data Cloud, where users "can access their Investment Books of Record (IBOR), Accounting Books of Record (ABOR) holdings" (Fivetran's blog)[22]	None of the 54 is a position API. Positions appear only as fields: a positions source in `PortfolioToolkitAPI`, and a violation's "underlying positions" (Violation spec)[6]
5 **Lot in the ABOR**	The accounting team, which says of itself: "we are data managers more than anything else" (Schneid or Shannon)[20]	Aladdin Accounting, named in the portfolio-configuration specification[6]	`AborLotAPI` v1 (alpha). ABOR lots, the accounting book of record, are "retrieved from the ledger_a_summary table" (AborLot spec)[6]
6 **NAV**	Accounting, whose clients are "CFOs, they're controllers, they're heads of performance" (Schneid or Shannon)[20]	Aladdin Accounting; each valuation carries an exception list[6]	`ValuationsAPI` v1, beta: valuations "generated for various processes at the portfolio/portfolio group level" (Valuations spec)[6]

■ Source: the public specifications named in each cell[6]; Newman[16]; the Explore training recording[21]; the Aladdin Accounting episode with David Schneid and Daniel Shannon, which does not label who is speaking[20]; Fivetran[22]. The specifications name no order screen and hold no position or event API, and they do not say in what sequence steps 4 to 6 happen. The labels in brackets are each specification's stability label: alpha is the earliest, then beta, stable and sunset; Exhibit 5 counts them.

Exhibit 3. Apps, Copilot and Studio all call one shared API layer

For illustrative purposes only. ■ Source: about 100 apps, with Copilot in all of them, Rosales and Vicente Valdez at 2:35[8]. The 11 domains behind the shared layer are the packages of BlackRock's public SDK, named as in its specifications[6, 23]. App names other than Explore come from field descriptions in those specifications, so their screens are not drawn[6, 21]. Aladdin Analytics is the name the risk specifications give the engine[6]. Studio, Woodhead at 4:49[1]; Excel tools and feeds, the APIs page[24]; Data Cloud fed by Aladdin data and analytics[1, 19]; hosting[25, 15]. Solid outline = shown in sources; hatched = announced, not live.

Exhibit 4. Six pieces make up Studio

Piece	What it is, in plain words
APIs (Aladdin Graph)	Ways for a program to read and write Aladdin data. Aladdin Graph is the whole API layer, not one API: every public specification carries an id of the form `agraph.<domain>.<segment>.<group>.v1.<API>`[6].
Event-driven APIs	Aladdin tells a program when something happens. Woodhead names "APIs events" as one part[1]; Diwakar Goel, Global Head of Data, Aladdin, wants "every single transaction … via an event, via an API"[26].
Aladdin Data Cloud	A managed data store on Snowflake, with Fivetran moving the data. Goel puts its latency at "within 15 minutes"[26].
Aladdin Compute	A hosted space where developers run Python next to their Aladdin data; the SDK has a run mode for "Aladdin Studio Compute sessions"[23].
Aladdin SDK	An open-source Python library that handles login, retries, rate limits, pagination and long-running operations[23]. Eleven add-on packages, one per API domain, are generated from the specifications by BlackRock's plugin builder[27].
Developer Portal and Data Dictionary	The API catalog, framework guides, field dictionary, notebooks and code samples the APIs page describes.

■ Source: BlackRock Studio and APIs pages[14, 24]; the 54 public specifications and SDK README[6, 23]; Woodhead[1] and Goel[26]. No event specification is public[6]; the catalog, guides, notebooks and samples sit behind a client login[24].

Exhibit 5. Two domains hold 127 of the 301 public API operations

Domain	Specs	Operations	Alpha	Beta	Stable	Sunset	Largest APIs by operations
Investment operations	15	**74**	9	4	2	–	PrincipalInterestFactor, CounterPartySettlementInstruction, MiscellaneousCashflow, CouponReset and 11 more
Analytics	9	**53**	–	–	8	1	RiskRule, RiskWorkflow, RiskException, RiskConfig and 5 more
Investment research	5	**41**	5	–	–	–	AnalystCoverage, Criterion, Watchlist, ResearchNote and 1 more
Platform	6	**29**	2	–	4	–	AdcDataset, UserGroup, User, UserGroupPermission and 2 more
Portfolio management	4	**28**	1	–	3	–	CIDWriter, Strategy, CIDReader, CashLadder
Portfolio	3	**23**	1	–	2	–	PortfolioGroup, RestrictedAsset, PortfolioToolkit
Data	1	**15**	–	–	1	–	SecurityCreation
Trading	2	**14**	1	–	1	–	Order, Trade
Compliance	4	**9**	3	–	1	–	ComplianceRuleAssignment, Violation, ComplianceRule, Level
Accounting	4	**8**	2	2	–	–	PortfolioConfiguration, Valuations, CompositeMembership, AborLot
Clients	1	**7**	–	–	1	–	EnrichedCapitalFlow
Total	**54**	**301**	**24**	**6**	**23**	**1**	11 domains, 11 PyPI packages

■ Source: the 54 Swagger 2.0 specifications inside the 11 `asdk_plugin` packages, version 2.0.0b3, on PyPI[6]. Counts are mine, recomputed from the files. The core `aladdinsdk` package adds four utility APIs (token, subscription, notification and a demo), not counted here. Alpha, beta, stable and sunset are the stability labels each specification carries (its `x-aladdin-api-stability` field), alpha being the earliest; the four columns count specs by label.

The specifications say more than Exhibit 5's counts: they show how the APIs behave. Posting an order takes `whatIf` and `runCompliance`, which defaults to true, and the response returns any compliance violations inline[6]. Ten specifications expose an endpoint for long-running operations, 35 operations are flagged as long-running, and the SDK polls them[23]. Risk exceptions and Data Cloud datasets carry bitemporal fields, which record two time dimensions. Rule assignments and dataset releases name a four-eyes approval, a second sign-off[6]. Every request carries an application key plus OAuth 2.0 scopes such as `trading.order_management.order.v1.Order:read`, and the client ID and secret come from the Studio UI[23].

What Studio is

Five BlackRock speakers define Studio in the 128 recordings I pulled for this document[28, 29]; Exhibit 6 lists each with the title the recording gives. BlackRock's own definition comes from the head of Studio engineering, on Snowflake's podcast in November 2025.

> "So we think about Aladdin today as a platform and Aladdin Studio is essentially the user experience that allows people to think of Aladdin as a platform. It exposes everything Aladdin knows how to do as a set of APIs events. The Aladdin data cloud built on top of Snowflake takes all of that information that's generated through our analytics factory and inside of Aladdin and pushes that into Snowflake. And increasingly we're building a set of developer tools."
>
> — Dave Woodhead, Managing Director and Head of Engineering for Aladdin Studio, Snowflake Data Cloud podcast, published November 11, 2025[1]

Exhibit 6. Five BlackRock executives have defined Studio on the record

Speaker	Title, as the recording gives it	What they add to the definition	Recording
Dave Woodhead	Managing Director and Head of Engineering for Aladdin Studio	Gives the three-part definition quoted above	Snowflake podcast, November 2025[1]
Richard Newman	General Manager, Aladdin Studio	Data Cloud is "part of Studio"; analytics APIs "releasing soon … all part of the Studio umbrella"	Never Done podcast, January 2025[16]
Diwakar Goel	Global Head of Data, Aladdin	Every transaction "via an event, via an API"; Data Cloud "within 15 minutes of latency"	Pensions webinar, 2025[26]
Kunal Khara	Managing Director and Global Head of Aladdin Product	Named "the Aladdin studio estate" as a 2024 focus, meaning programmatic access "at machine scale"	Awards interview, early 2024[30]
Jeff Miller	Managing Director, Global Head of Data Platform and Product Engineering	Data Cloud replaced "flat files … FTP and related transfers"	Snowflake video, undated[31]

Source: the recordings cited in the Recording column. Quotations are verbatim from the transcripts; three of the five are machine transcriptions, marked as such in the Sources section at the end of this document.

Four of the five describe Studio in the same terms, APIs and events plus the Data Cloud, and two of those four add developer tools. Newman calls Data Cloud "part of Studio"[16]. Goel describes events, APIs and a near-real-time data store[26]. Khara calls it programmatic access to data and reporting[30]. A 2026 job posting calls Studio "Aladdin's extensibility layer"[32]. The message is consistent across speakers and years, so BlackRock already has a positioning for Studio. Learning about it from outside takes effort. The catalog has to be unpacked from packages. The definitions have to be transcribed from recordings.

Exhibit 7. All four speakers name APIs, events and the Data Cloud as parts of Studio

Speaker, date	What they said	APIs and events	Data Cloud	Developer tools
Kunal Khara, early 2024	"More users are craving this ability to interact with our data, with their data, with reporting with dashboards on a programmatic basis"[30]	**Yes**	**Yes**	–
Richard Newman, January 2025	"The Aladdin data cloud … which is part of Studio"; "those analytic APIs … That's all part of the Studio umbrella"[16]	**Yes**	**Yes**	–
Diwakar Goel, 2025	"Every single transaction … via an event, via an API"; "a near real time data store"; exposing "the software and application that we're building"[26]	**Yes**	**Yes**	**Yes**
Dave Woodhead, November 2025	"It exposes everything Aladdin knows how to do as a set of APIs events. The Aladdin data cloud built on top of Snowflake … developer tools"[1]	**Yes**	**Yes**	**Yes**

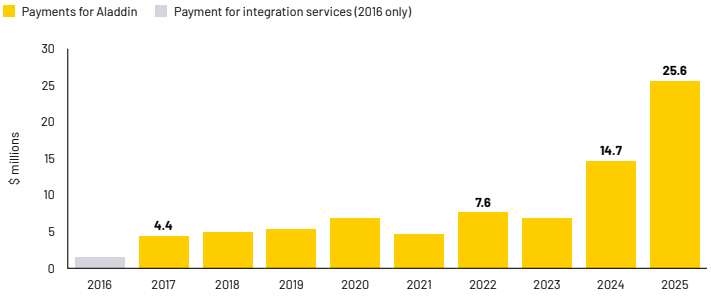

Source: the four recordings cited[30, 16, 26, 1]. Quotations are verbatim; Khara, Goel and Woodhead are machine or auto-caption transcriptions, marked as such in the Sources section at the end of this document. Yes means the speaker names that part; – means not. Only Goel and Woodhead name developer tools.

Part 2

1. The public record of clients using Aladdin can serve as Studio's proof

BlackRock's Studio page names no client building on Studio[14], and a full-text search of SEC EDGAR finds no filing that mentions Studio[33]. Proof that clients use Aladdin, though, is public. On BlackRock's video, Royal London's chief executive credits Aladdin's Snowflake implementation[34]. JPMorgan Chase's proxy statements report Aladdin payments of $4.4 million to $7.6 million a year from 2017 to 2023, then $14.7 million in 2024 and $25.6 million in 2025[35, 36].

Exhibit 8. JPMorgan Chase's payments for Aladdin rose from under $8 million a year to $25.6 million in 2025

Source: JPMorgan Chase proxy statements (DEF 14A) filed 2017 to 2026[35, 36]. The chart plots each payment in the year it was made. The grey 2016 bar is a payment for integration services; the figures in the text start with 2017. JPMorgan is also a custodian, so the payments may cover more than a client license. In 2016 it said it was connecting to Aladdin for custody clients[37]. That 2016 report is trade press, not a JPMorgan or BlackRock document.

A second kind of record is code written by a client's engineers. In December 2025 an engineer at a client firm submitted two changes to the open-source SDK: URL rewriting and custom headers. Both are for firms that route Aladdin calls through an enterprise gateway. The BlackRock engineer who co-wrote the SDK's launch post merged them[38, 39, 40, 41]. Janus Henderson's 10-K says that in the third quarter of 2025 the firm chose to move its investment management system to Aladdin, "a complex, multi-year initiative"[42]. Public buyers add a third kind of record: procurement notices.

Exhibit 9. Aladdin won the tenders of three public pension bodies

Buyer	Year	Outcome
UK Pension Protection Fund[43]	2025	Aladdin won both parts of the tender, at a price above the fund's own estimate
Nest (UK)[44]	2023	Aladdin won against six other bids
US Pension Benefit Guaranty Corporation[45]	2017 and 2023	Aladdin won in 2017 and again in 2023, at an unchanged price

Source: UK Find a Tender[43, 44]; USAspending.gov[45].

None of this proof names Studio, which matters less than it seems. Studio is sold for building custom applications on Aladdin, so a buyer wants to know that another institution built on the platform and stayed. Proof from one firm counts even when the buyer is a different kind of firm. Public pension funds, and firms whose filings or tenders already name BlackRock, are easier to name in public. So they are the natural first candidates for a named Studio story.

What this finding suggests about direction. A named Studio story can start with clients whose Aladdin use is already on the record.

2. BlackRock's growth story to investors runs through Studio, though it rarely says the name

BlackRock tells investors growth will come from API calls, without naming the product behind them. It projected at its 2025 Investor Day that API calls across BlackRock and Aladdin would grow 17x by 2030[10]. Attributing them to Studio is my inference[10]. I make that inference because API use is the activity the Studio page describes[14]. No executive said "Studio" on any of the 26 earnings calls from the first quarter of 2020 to the second quarter of 2026[46]. Outside the calls, the only investor-facing mention I found is a single line on a 2023 Investor Day slide[47]. BlackRock's 10-K says technology services fees are generally set by the value of positions on the platform or at a fixed rate. They can also depend on subscriptions, go-lives and support. The 10-K does not list API calls among the fee terms it names[11, 10].

Exhibit 10. No BlackRock executive said "Studio" on any of 26 earnings calls, Q1 2020 to Q2 2026

Term	Mentions	Where it came up
Studio	**0**	**Never on a call. The only investor-facing mention found is one line on a 2023 Investor Day slide[47]**
Data Cloud	2	Q3 2022[48] and Q4 2024[49], where it was described as an add-on sold with Aladdin Enterprise
API	1	Q4 2021: "clients are really looking to use both data and APIs"[50]
Copilot	1	Q4 2023: "investments in Aladdin AI copilots"[51]
Citizen developer	0	Never
Agent	0	Never

Source: third-party transcripts of BlackRock earnings calls, Q1 2020 to Q2 2026[46]. My tally. The non-zero counts add up to about four mentions in six and a half years. A zero means the term appears in no transcript; the non-zero counts are approximate.

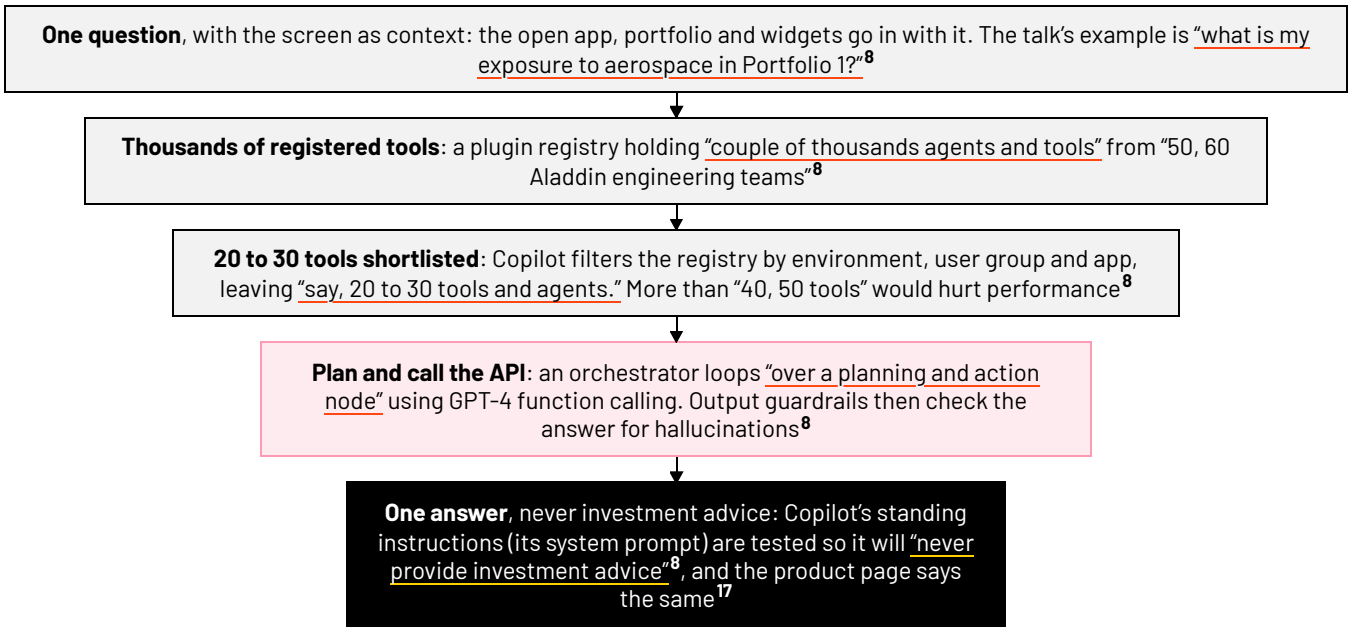

The private-markets data BlackRock has been adding reaches clients through Data Cloud and Explore. BlackRock bought eFront in 2019 and Preqin in 2025. In September 2025 its private markets team described the result on a client webinar[52]. Investors "now have access to over 15,000 fund investments within eFront Insight" for benchmarking. Preqin indices "are also available today in Aladdin Explore and our Aladdin Data Cloud capabilities". And "over 10 different transaction types" were added to Aladdin, covering commitments, fundings, paydowns and PIK, so private credit loans are captured natively. The team said those were designed with BlackRock's own professionals and "our new colleagues from HPS"[52]. Private credit analytics on Preqin followed in May 2026[13]. Newman, the Studio general manager, names eFront data and Preqin among the data being added to Data Cloud[16].

What this finding suggests about direction. BlackRock itself says growth will come from API calls, the fastest-growing measure it showed investors. The data it is adding, private markets and Preqin, arrives through Data Cloud and Explore. Both are Studio surfaces.

3. Aladdin's AI answers inside the login; data providers let outside AI tools reach their data

Aladdin Copilot, the AI inside the login, is built on the same APIs Studio exposes. It draws on a registry of plugins, "couple of thousands agents and tools," built by Aladdin's engineering teams. The first way a team adds a tool is "to define a tool as kind of mapping one-to-one to an existing Aladdin API already out in production"[8]. So Copilot's tools are Studio's APIs. Microsoft's Adrian Crockett made the dependence plain on BlackRock's podcast: "There's no copilot without plug-ins"[53]. On the data side, BlackRock's AI product head says the team is making sure "the data model itself is structured for agentic use cases"[54].

Exhibit 11. Copilot answers a question by choosing from thousands of tools and calling production Aladdin APIs

Source: Rosales and Valdez at LangChain Interrupt 2025[8]; the Copilot page[17]. The tool counts are the speakers' own approximations; the talk is a machine transcription, marked as such in the Sources section.

Exhibit 12 lists what the providers a Studio buyer compares have made public about AI access. Six data and cloud providers that Studio buyers also use offer a connector or an MCP server, and two system-of-record rivals have announced AI features. LSEG had 90 customers connected by April 2026, according to a secondary summary of its results slides[55, 2].

Exhibit 12. Of nine providers a Studio buyer compares, eight have announced AI features or AI access to their data

Provider	What is public	Receipt
System-of-record rivals		
SimCorp	Agent Launchpad, announced in 2026, is to offer prebuilt AI agents and let clients build their own on SimCorp One's data layer	SimCorp news[7]
Arcesium	Arcesium added AI features to Aquata and announced an AI platform	Arcesium press releases[56, 57]
Data and cloud providers		
FactSet	FactSet runs an MCP server for its data and calls it the first in its market	FactSet press release[3]
LSEG	LSEG has announced a collaboration with Anthropic and an MCP server. It had 90 customers connected by April 2026	LSEG press release[2]; Investing.com summary[55]
MSCI	MSCI offers "AI connectors" to its proprietary data	MSCI press release[4]
S&P Global	S&P Global added Credit Ratings to its AI Data Portal in September 2026	S&P Global press release[58]
Snowflake	Snowflake documents an MCP server for Cortex Agents	Snowflake documentation[5]
Databricks	Databricks documents managed MCP servers	Databricks documentation[59]
Aladdin	**A Forward Deploy Engineer posting for Aladdin Data names "Model Context Protocol (MCP), AI agents, and Copilot extensions"**	**BlackRock Careers[60]**

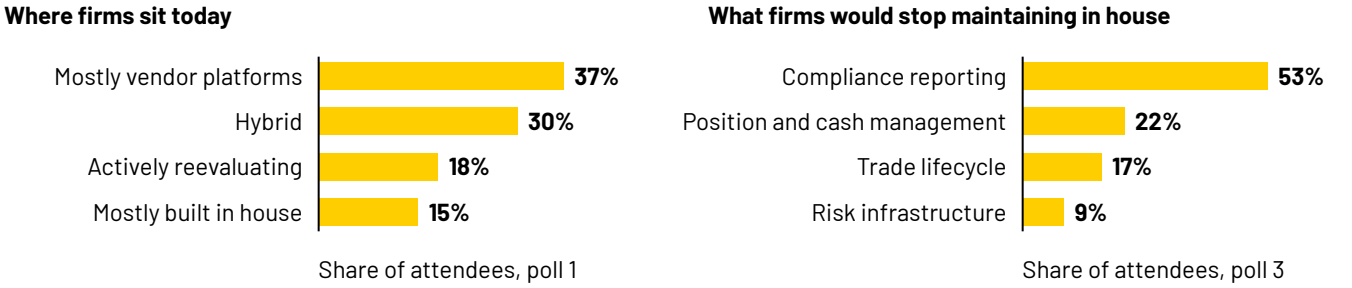

Source: the press releases, documentation and job posting in the Receipt column, as of October 2026. Aladdin has only a job posting that mentions MCP[60]. The LSEG customer count is from a secondary summary[55]. Among system-of-record rivals, only SimCorp and Arcesium have an AI announcement in my sources. State Street, Clearwater and Bloomberg have none, so they are not listed.

> **What this finding suggests about direction.** A public account of the Copilot plugin model would cover production Aladdin APIs, the same ones Studio exposes, each user's own permissions, and tested no-advice guardrails[8, 17]. That account answers three governance questions: who can call what, with which permissions, and under which guardrails.

4. Buyers at BlackRock's own webinar said they want a core platform plus their own builds

BlackRock ran a Build vs. Buy webinar for asset managers and polled the attendees. The first poll asked where firms sit today. 37 percent said they run "mostly vendor platforms," 30 percent run a "hybrid," 18 percent are "actively reevaluating," and 15 percent are "mostly built in house"[9]. The second poll asked what is driving the build-or-buy decision. "AI and data demands" led at 42 percent; cost and speed to market tied for second[9]. The third poll asked what they would stop maintaining in house. 53 percent chose compliance reporting[9].

Exhibit 13. Webinar attendees mostly run vendor or hybrid platforms and would stop maintaining compliance reporting in house first

Source: poll results read out on the Build vs. Buy webinar, from the replay's published captions[9].

> "What's the API suite that you have? Are you using connectors to Snowflake or to Databricks? And I think that that part of the RFP has become much more prominent."
>
> — Clark Schafer, Partner, Alpha FMC, on the Build vs. Buy webinar[9]

Alisha Sewdass, BlackRock's Head of Aladdin Solutions Engineering, Americas, gave BlackRock's side on the same webinar. She described the shift of the last two years. It is "to more of a modular approach where clients are looking for that backbone foundational data that supports both publics and privates workflows." That comes, she said, with "very, very robust APIs that manage the end to end life cycle of a transaction." Those APIs let clients build "their secret sauce rebalancing tools" on top[9]. On AI, she said, "you need that system of record that underpins anything that AI is built upon." She also said "the other layer that is almost equally important is a really defined system of work"[9].

Rivals are selling to the same buyer, the one who wants a core platform plus their own builds. SimCorp announced wins at AllianceBernstein in February 2026 and Pictet in May 2026. AllianceBernstein keeps its "specialized in-house technology," and Pictet connects its own tools to SimCorp One by API[61, 62]. BlackRock's own August 2026 insight page says the same: "Build vs buy is no longer a binary question"[63].

> **What this finding suggests about direction.** Buyers now ask in RFPs whether they can build on the platform. Studio is the right kind of answer.

Part 3

Directions to explore

The findings suggest that Studio could be presented as the place where a client's own AI tools act on investment data under the same controls BlackRock's own business runs on. BlackRock has said parts of this. It sells Aladdin as the system it runs internally[14, 17, 19, 8]. Its speakers have said that the system of record underpins anything built with AI[9], and that the data model is being structured for agentic use[54]. I have not found it describe Studio this way.

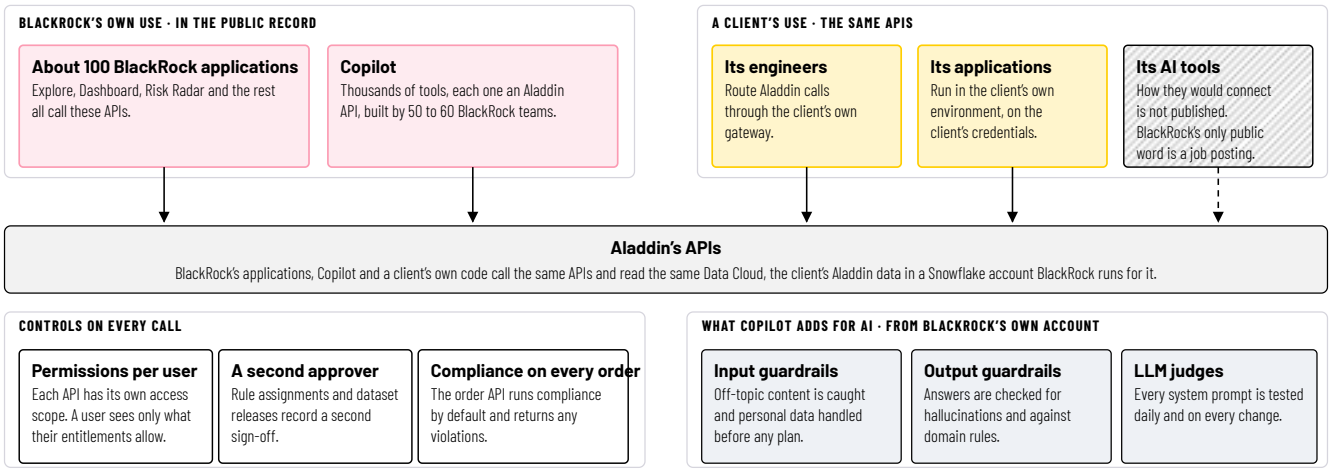

Letting AI tools act is unlikely to stay unique. SimCorp has announced AI agents, Arcesium an AI platform, and other systems of record will likely follow[7, 56, 57]. What BlackRock can show is its own use. About 100 of its applications and thousands of Copilot tools, built by 50 to 60 of its teams, call these APIs every day under each user's permissions[8]. Every order is checked for compliance by default, and Copilot's guardrails are tested daily[6, 8]. A client's AI tools would work under controls BlackRock already relies on for its own business. How those tools would connect is not public[60].

Buyers say AI is changing what they build. "AI and data demands" led BlackRock's webinar poll at 42 percent as the reason firms are rethinking what to build and what to buy, and buyers now ask about APIs and connectors in RFPs[9]. The poll did not ask whether clients want AI tools that act on Aladdin, and it gives no sample size.

The client base is large. BlackRock serves hundreds of Aladdin clients in 70 countries, and its technology services revenue was $2.0 billion in 2025[8, 11]. It projects API calls to grow 17x by 2030, and AI tools acting for clients could become a large source of them[10]. Linking that figure to Studio is my inference. How many clients use the APIs today, or run their own AI tools, is not public.

Three things would have to be true for this direction to hold. Clients would have to want AI tools that act, not only ones that answer questions. Their risk teams and regulators would have to accept it, which likely means a person approves each action. And BlackRock would have to open its controls to tools it did not build.

Exhibit 14. BlackRock's applications and a client's code call the same APIs under the same permissions

■ Solid boxes are in the public record. The hatched box is not: on a client's AI tools BlackRock has published nothing beyond a job posting[60]. The right-hand controls show how BlackRock governs AI on these APIs today, which is the model a client's own AI tools could follow. Sources: Rosales and Valdez[8], the Copilot page[17], pull requests 52 and 53[38, 39], the SDK README[23], the public specifications[6], the Data Cloud page[19], Woodhead[1] and Fivetran[22].

Exhibit 15. Four pieces of marketing work to explore, in the order I would start them

	The work	What it is	How to know it worked
1	**An answer for RFPs**	A ready answer to "what APIs do you have, and can we connect to them": the APIs by area with their package labels, how permissions work, how a client routes calls through its own gateway, and the Snowflake and Databricks answer, plus how a client's own AI tools would connect.	Time to answer the API section of an RFP; RFPs that score Studio; how many of those are won
2	**How a client's AI tools act on Aladdin**	A page on how a client's own AI tools could read data and take actions through Aladdin's APIs, under the same permissions, compliance checks and guardrails Copilot uses.	The page is published; RFPs and deal reviews get a clear answer on AI connections; API calls from client AI tools
3	**One client willing to be named**	One client story, cleared for the Studio page and the RFP answer: a public pension fund already on record, or a client whose engineers have contributed to the SDK.	Named clients sales can cite; deals in which one is cited
4	**A worked example: an AI-proposed rebalance**	A page and a demo in which a client's AI tool proposes a rebalance through the order API. Aladdin runs what-if and compliance on every order and returns any violations, and a portfolio manager approves before anything trades. Sewdass names rebalancing tools as what clients build on Aladdin's APIs[9].	Meetings that open on this example; pipeline tagged to it; API calls from clients who build it

Part 4

What I could not see

Everything here was read from outside, which limits what this document can be sure of. Exhibit 16 follows a prospect's engineer through six steps, from first hearing about Studio to getting help. For each step it records what is public today and what a client receives after qualification. I could read the pages, unpack the specifications and read the SDK's code. I could not run anything, open the catalog, guides, notebooks or samples, or test what a client receives; where this document describes those, it relies on what sources say.

Exhibit 16. What I was not able to see from outside, and what opens after qualification

Step	Public today	After qualification	Receipt
Hear	Podcasts, webinar replays, client videos and conference talks on BlackRock's site and partner channels	Client forums and the solutions team	the Never Done podcast[28], the Big Little Questions video series[29], Woodhead[1], Rosales and Valdez[8]
Read	The Studio page ("Create & automate," "Make Aladdin your own," "Align internally & externally") and the APIs page, which promises "dozens of APIs"	The Developer Portal and the API framework guides	Studio page[14], APIs page[24]
See the catalog	The 54 specifications, but only by unpacking the 11 PyPI add-on packages	The API catalog and the Data Dictionary	asdk_plugin packages[6], APIs page[24]

Step	Public today	After qualification	Receipt
Try	Nothing to run: no public sandbox or trial is offered	Studio Compute; an API token or an OAuth application "registered via Studio UI"; and the client's own Aladdin host to call	SDK README[23]
Build	The open-source SDK on GitHub and PyPI, with a detailed README; the plugin builder	A client host and credentials, which the SDK needs for every call	SDK README[23], PyPI history[64], plugin builder[27]
Get help	GitHub issues and pull requests on the SDK, answered by BlackRock engineers; on the Studio page, "Book a meeting" and "Download the brochure"	Notebooks, code samples, support	Pull request 52[38], pull request 57[65], Studio page[14]

■ Source: the pages and repositories in the Receipt column, read with no account or login, October 2026. The After qualification column is what those sources say a client receives; I did not test it.

The SDK is the one piece of Studio a prospect can install before any conversation. Its README documents three run modes: "a developer's local machine," "Aladdin Studio Compute sessions" and a test mode. It stores a prompted password in the operating system's credential manager. It carries settings for firms that consume "the Aladdin APIs via an enterprise API management platform such as Azure API Management"[23].

Exhibit 17. Investment platforms, Studio among them, open to developers only after a relationship exists

2: Fully public or self-serve 1: Partial or after sign-up or approval 0: None or blocked

Platform	Public docs	API catalog	Trial or sandbox	First API call without a contract	Sample code	Community or marketplace	AI connector	Call to action
Investment platforms								
Bloomberg	1	0	1	1	1	0	0	1
Aladdin Studio	**1**	**1**	**0**	**0**	**1**	**1**	**0**	**0**
State Street	1	0	1	0	0	1	0	1
Arcesium	0	0	0	0	0	1	2	0
SimCorp	0	0	0	0	0	1	0	0
Clearwater	0	0	0	0	0	1	0	0
Data and cloud platforms								
Snowflake	2	2	2	2	2	2	2	2
Databricks	2	2	2	2	2	2	2	2
LSEG	1	2	1	1	2	2	2	1
FactSet	2	2	0	0	2	1	2	0
MSCI	0	0	0	0	0	0	2	0

For the AI connector score: 2 means a connector that outside AI tools can use, such as an MCP server. 1 means one announced or in limited release. 0 means none, or an assistant that works only inside the vendor's own platform.

■ Source: my test of each platform's public pages[14, 66, 67, 68, 69, 70, 7, 57, 4], no accounts or payments, October 8, 2026. Bloomberg, Clearwater and MSCI may score lower than they deserve, because some of their pages blocked automated access.

Exhibit 17 puts Studio beside 10 platforms that a Studio buyer also deals with[66, 67, 68]. It scores each on eight things a developer with no client relationship can reach: 2 where the vendor opens it before any sale, 0 where access follows a relationship. The pattern is each vendor's selling model. Investment platforms cluster low because they gate. At Aladdin, as at Bloomberg, State Street, SimCorp, Clearwater and Arcesium, documentation, a sandbox and a first call come after a relationship exists. Data and cloud platforms sell to developers directly and cluster high.

About this document

This is an independent analysis compiled from public sources. The sources are BlackRock product pages, SEC filings, procurement notices, public code and packages on GitHub and PyPI, press releases, job postings, and transcripts of BlackRock recordings. BlackRock did not produce, review or endorse it. Facts are as of October 19, 2026, unless an exhibit gives another date.

AI agents pulled the pages, unpacked the packages, transcribed the recordings and drafted the text. I checked each claim against the document or recording it cites.

Underlined text links to the document behind each fact. Superscripts point to the Sources section, which follows this page and gives each source's grade (P, S or T), title, speaker and date.

BlackRock and Aladdin are registered trademarks of BlackRock, Inc. Other company and product names are the property of their owners.

Sources

Sources are numbered in the order they are first cited, then grouped into three grades, so the numbers within a group are not consecutive. P is a primary document. S is a BlackRock speaker on the record, with name and title as the recording gives them. T is a third-party report. For recordings, each entry gives the minute and second at which each quoted passage begins. "Machine transcription" means speech-to-text software run locally on the downloaded audio. "Auto-captions" means YouTube's captions. Both can mishear names and jargon. Inside quotations, the only correction made was to the spelling of proper names the captions got wrong.

S. BlackRock speakers on the record

1 **S From Analytics To Intelligence: BlackRock's Journey To Data Productization (Snowflake Data Cloud podcast; auto-captions)**. Dave Woodhead, Managing Director and Head of Engineering for Aladdin Studio, BlackRock, published November 11, 2025, the episode date given by the podcast's RSS feed (feeds.simplecast.com/eoH3iEB8). https://www.youtube.com/watch?v=Me_H_-E6lSg Quoted at 4:36, 4:46, 4:49, 4:58, 8:48, 9:39, 9:43, 9:51, 18:37, 18:44.

8 **S How BlackRock built production AI agents for asset management with LangGraph (LangChain Interrupt 2025; machine transcription)**. Brennan Rosales, AI Engineering Lead, and Pedro Vicente Valdez, Principal AI Engineer, BlackRock, 2025. https://www.youtube.com/watch?v=oyqeCHFM5U4 Quoted at 1:33, 1:44, 1:53, 3:58, 4:31, 5:27, 6:42, 7:16, 7:22, 7:34, 10:30.

9 **S Build vs. buy: how asset managers are rethinking key decisions (webinar replay; published captions)**. Michael Campos, US asset manager coverage, and Alisha Sewdass, Head of Aladdin Solutions Engineering, Americas, BlackRock, with Clark Schafer, Partner, Alpha FMC. Replay page undated. https://www.blackrock.com/aladdin/discover/expertise/webinars/build-vs-buy-how-asset-managers-are-rethinking-key-decisions Quoted at 4:37, 4:40, 14:46, 24:34, 31:56, 32:01, 39:15, 39:42, 42:22, 47:41 (Sewdass at 31:56, 32:01, 39:15 and 39:42; Schafer at 42:22).

16 **S Data: the key ingredient (Never Done podcast, with Snowflake; published transcript)**. Richard Newman, General Manager, Aladdin Studio, BlackRock, January 8, 2025. https://www.blackrock.com/aladdin/discover/podcast/snowflake-podcast-data-the-key-ingredient Quoted at 0:23, 1:32, 1:54, 2:00.

20 **S How can tech transform numbers into insightful narratives? (Big Little Questions, Aladdin Accounting episode; machine transcription)**. David Schneid and Daniel Shannon, Aladdin Accounting, BlackRock, undated; the recording does not label which of the two is speaking. https://www.blackrock.com/aladdin/discover/expertise/big-little-questions Quoted at 0:32, 1:05, 1:23.

26 **S Data as a strategic asset for pensions (webinar replay; machine transcription)**. Diwakar Goel, Global Head of Data, Aladdin, BlackRock, 2025 (the replay page gives no date). https://www.blackrock.com/aladdin/discover/expertise/webinars/data-as-a-strategic-assets-for-pensions Quoted at 25:22, 28:52, 29:28, 29:37.

30 **S Best Overall Technology Provider for 2023, Buy-Side Technology Awards winner interview (machine transcription)**. Kunal Khara, Managing Director and Global Head of Aladdin Product, BlackRock, early 2024. https://www.blackrock.com/aladdin/discover This is the hub page; the interview video is linked from it. Quoted at 18:37, 18:42, 18:48.

31 **S BlackRock transforms client data delivery with Snowflake's Aladdin Data Cloud (Snowflake video; machine transcription)**. Jeff Miller, Managing Director, Global Head of Data Platform and Product Engineering, BlackRock, undated. https://www.youtube.com/watch?v=3iXd7a7_F6g Quoted at 0:36.

34 **S Shaping tomorrow with technology (Aladdin client story video; machine transcription)**. Hans Georgeson, Chief Executive, Royal London Asset Management, with Tarek Chouman, Global Head of the Aladdin Client Business, recorded November 2024. https://www.blackrock.com/aladdin/discover/client-story/client-testimonial-royal-london-asset-management Not quoted. The Snowflake passage that Finding 1 refers to begins at 5:21.

52 S **Unifying the whole portfolio across public and private markets (webinar replay; machine transcription)**. Melissa Faraz, Global Head of Business Development for Private Markets Analytics Platforms and Head of Preqin London. Paul McGaugh, Managing Director, Aladdin Private Markets Product. Cameron Skinner, Managing Director and Global Head of Solutions Engineering; all three at BlackRock, September 2025. https://www.blackrock.com/aladdin/discover/expertise/webinars/unifying-the-whole-portfolio-across-public-and-private-markets Quoted at 17:36, 19:21 (McGaugh), 20:51, 21:21 (Faraz).

53 S **Humans in the loop, robots on the team, part 2 (Never Done podcast; published transcript)**. Adrian Crockett, General Manager, Microsoft Cloud for Financial Services, with Syril Smith Garson, Head of Product for AI, BlackRock, November 6, 2024. https://www.blackrock.com/aladdin/discover/podcast/microsoft-part-2-podcast Quoted at 8:00 (Smith Garson), 17:29 (Crockett).

54 S **Reducing time to insight: how AI reshapes risk management (Never Done podcast; machine transcription)**. Pavan Pemmaraju, Head of AI Product and Engineering, BlackRock, July 16, 2026. https://www.blackrock.com/aladdin/discover/podcast/reducing-time-to-insight-how-ai-is-reshaping-risk-management Quoted at 10:00, 17:37. The episode also features Jess Fitzgibbon, Head of Product for Aladdin Risk. The recording does not label speakers, so this document does not attribute the 10:00 passage to either by name.

T. Third-party reports

21 T **Blackrock Aladdin Explore: Intro (an Aladdin classroom session; third-party YouTube upload; machine transcription)**. Uploaded by the channel "jas jas," speaker not named, undated. https://www.youtube.com/watch?v=BahCi45_BTc Quoted at 6:26, 9:34.
