Part 1

What the public record shows

Aladdin is the investment platform BlackRock built for itself and sells to other institutions. Brennan Rosales, an AI Engineering Lead at BlackRock, put the scale this way at a LangChain conference in 2025. "BlackRock is the biggest user of Aladdin, but we also sell and support hundreds of clients globally across 70 countries." The organization is "around 7,000 people, with over 4,000 of those being engineers." They maintain "around 100 Aladdin front-end applications"[9]. BlackRock's technology services and subscription revenue was $2.0 billion in 2025, up 24 percent including Preqin, the private-markets data firm bought in 2025[12]. BlackRock sells Aladdin as four platforms that share one data language. They are the Aladdin platform, eFront, Aladdin Wealth and Preqin[13]. Studio is the entry point for people who write code[14].

What BlackRock sells

Exhibit 1. Of eight Aladdin products, Studio is the one for people who write code

Product	What it does	Main users
Aladdin	The front-to-back system for public and private markets[15], the same system BlackRock runs internally[9]	Asset managers, insurers, pension funds, banks
Aladdin Wealth	Portfolio risk analysis and proposals for advisors[16]. Its AI "auto commentary" tool launched in October 2025, with Morgan Stanley as the first client[17]	Wealth managers and private banks
eFront	A private-fund investment platform covering due diligence through cash flows and reporting. Preqin now sits inside eFront Insight[18], and private credit analytics were added on Preqin in May 2026[19]	Investors in funds and fund managers
Aladdin Studio	**The developer and data layer. It covers APIs and events, Aladdin Data Cloud, and developer tools[1]. BlackRock calls it "API-first" and names three users: "a professional engineer building new workflow applications, a code-curious portfolio manager extracting investment insights, or a data analyst automating reporting"[14]**	**Client engineers, data analysts, code-curious portfolio managers**
Aladdin Data Cloud	A managed data service on Snowflake that puts Aladdin and outside data in one place[20]. It is sold as an add-on to Aladdin Enterprise[21]. Richard Newman, General Manager, Aladdin Studio, calls it "part of Studio"[22]	Data teams
Aladdin Copilot	A chat assistant "now available to all Aladdin clients" that "will not give investment advice"[23]	All platform users
Aladdin Accounting	Investment accounting and performance[24]. Its public APIs cover configuration, valuations, lots and composites[6]	Asset managers and asset owners
Aladdin Provider	Connects custodians and administrators to a client's Aladdin. The providers pay BlackRock to use it[25]	Custodians and administrators

Source: BlackRock product pages[14, 15, 18, 20, 23]; BlackRock AWS release, December 2025[21]; Woodhead[1]; iShares prospectus[25]; the public specifications[6].

Exhibit 2 follows one trade through Aladdin, step by step, as far as the 54 public specifications describe it[6, 26].

Exhibit 2. The public APIs follow a trade from order to NAV

Step	Who acts	Product or application BlackRock names	API that covers it
1 **Order**	The portfolio manager. An order is "a directive from a portfolio manager to the trading desk to execute a particular investment decision" (Order spec)[6]	The Explore application: its "new what-if model" (Explore classroom recording) shows a changed portfolio beside the original[27]	`OrderAPI` v1 (stable). Posting an order takes `whatIf` and `runCompliance`. Its example statuses run "Open," "Compl Pending," "Authorized," "Active," "Booked"[6]
2 **Compliance check**	No one. The check runs automatically when the order is posted, because `runCompliance` is on by default. A violation record can hold an owner and a user's resolution comment. It gets a disposition when closed[6]	Rules "automatically monitor whether a fund adheres to a regulation, client mandate, or internal guideline" (ComplianceRule spec). The Level spec names the application "Aladdin Compliance"[6]	`ComplianceRuleAPI` and `ViolationAPI` v1 (alpha). Violations are "generated at time of the compliance breach" (Violation spec). A check that times out posts the order as "Compl Pending"[6]
3 **Trade**	The trading desk. Operations then confirms it, because "after a trade is booked in Aladdin, it needs to be confirmed with broker" (BrokerConfirmRouting spec)[6]	David Schneid, head of product management for Aladdin Accounting, describes the run as going "from that first order through the trade, through all the operation protocols into accounting without lifting up the pencil"[26]	`TradeAPI` v2 (alpha). A block trade carries its per-portfolio trades, plus `confirmedWith` and `confirmedBy`. `BrokerConfirmRoutingAPI` holds each broker's instructions for delivering confirms[6]
4 **Position in the IBOR**	The investment team, whose live book is the IBOR, the investment book of record. Richard Newman, Studio's general manager: "It does start with IBOR"[22]	Aladdin Data Cloud, where users "can access their Investment Books of Record (IBOR), Accounting Books of Record (ABOR) holdings" (Fivetran's blog)[28]	None of the 54 is a position API. Positions appear only as fields, for example a positions source in `PortfolioToolkitAPI`, collateral positions in `CollateralStatementAPI` and a violation's "underlying positions" (Violation spec)[6]
5 **Lot in the ABOR**	The accounting team. Daniel Shannon, BlackRock's head of outsourced platform services, says "we are data managers more than anything else"[26]	Aladdin Accounting, named in the portfolio-configuration specification[6]	`AborLotAPI` v1 (alpha). ABOR lots, the accounting book of record, are "retrieved from the ledger_a_summary table" (AborLot spec)[6]
6 **NAV**	Accounting, whose clients are "CFOs, they're controllers, they're heads of performance" (Schneid)[26]	Aladdin Accounting; each valuation carries an exception list[6]	`ValuationsAPI` v1, beta: valuations "generated for various processes at the portfolio/portfolio group level" (Valuations spec)[6]

■ Source: the public specifications named in each cell[6]; Newman[22]; the Explore training recording[27]; the Aladdin Accounting episode with David Schneid and Daniel Shannon[26]; Fivetran[28]. The specifications hold no position or event API. They do not say in what sequence steps 4 to 6 happen. The labels in brackets are each specification's stability label: alpha is the earliest, then beta, stable and sunset; Exhibit 5 counts them.

Part 1

What the public record shows

Aladdin is the investment platform BlackRock built for itself and sells to other institutions. Brennan Rosales, an AI Engineering Lead at BlackRock, put the scale this way at a LangChain conference in 2025. "BlackRock is the biggest user of Aladdin, but we also sell and support hundreds of clients globally across 70 countries." The organization is "around 7,000 people, with over 4,000 of those being engineers." They maintain "around 100 Aladdin front-end applications"[9]. BlackRock's technology services and subscription revenue was $2.0 billion in 2025, up 24 percent including Preqin, the private-markets data firm bought in 2025[12]. BlackRock sells Aladdin as four platforms that share one data language. They are the Aladdin platform, eFront, Aladdin Wealth and Preqin[13]. Studio is the entry point for people who write code[14].

What BlackRock sells

Exhibit 1. Of eight Aladdin products, Studio is the one for people who write code

Product	What it does
Aladdin	The front-to-back system for public and private markets[15], the same one BlackRock runs internally[9]
Aladdin Wealth	Risk analysis and proposals for advisors[16], with an AI commentary tool since October 2025[17]
eFront	A private-fund platform holding Preqin[18], with private credit analytics added in May 2026[19]
Aladdin Studio	**The developer and data layer: APIs and events, Data Cloud, developer tools[1].** For engineers, data analysts and code-curious portfolio managers[14]
Aladdin Data Cloud	Managed data on Snowflake[20], sold as an add-on to Aladdin Enterprise[21], and part of Studio[22]
Aladdin Copilot	A chat assistant available to all Aladdin clients that gives no investment advice[23]
Aladdin Accounting	Investment accounting and performance[24], with public APIs for valuations, lots and composites[6]
Aladdin Provider	Links custodians and administrators to a client's Aladdin, and they pay BlackRock for it[25]

■ Source: BlackRock product pages[14, 15, 18, 20, 23]; BlackRock AWS release, December 2025[21]; Woodhead[1]; iShares prospectus[25]; the public specifications[6].

Exhibit 2 follows one trade through Aladdin, step by step, as far as the 54 public specifications describe it[6, 26].

Exhibit 2. The public APIs follow a trade from order to NAV

	1 Order	2 Compliance check	3 Trade	4 Position in the IBOR	5 Lot in the ABOR	6 NAV
Who	Portfolio manager	No one	Trading desk, then operations	Investment team[22]	Accounting team[26]	Accounting[26]
Where	Explore[27]	Aladdin Compliance[6]	–	Data Cloud[28]	Aladdin Accounting[6]	Aladdin Accounting
API	`OrderAPI` v1 (stable)	`ComplianceRuleAPI` and `ViolationAPI` v1 (alpha)	`TradeAPI` v2 (alpha)	**None of the 54 is a position API**	`AborLotAPI` v1 (alpha)	`ValuationsAPI` v1 (beta)
Detail	Posting takes `whatIf` and `runCompliance`[6]	Runs automatically: `runCompliance` is on by default[6]	Broker confirms via `BrokerConfirm` `RoutingAPI`[6]	Positions appear only as fields in other APIs[6]	Retrieved from the `ledger_a_summary` table[6]	Each valuation carries an exception list[6]

The public specifications cover the trade but hold no position or event API, and do not say in what sequence steps 4 to 6 happen.

The labels in brackets are each specification's stability label: alpha is the earliest, then beta, stable and sunset. Exhibit 5 counts them. ■ Source: the specifications named in each step[6]; Newman[22]; the Explore training recording[27]; the Aladdin Accounting episode[26]; Fivetran[28].
