Eight citation fixes from the drift check

Two checkers read every changed sentence against its source. These eight did not match, and I confirmed each in the source text. Superscript numbers are shown in brackets. They are the numbers after the fixes. The preview is otherwise unchanged and stays at 19 pages.

---

1. LSEG customer count (page 9, Exhibit 12 row and note on page 10)

The cited Investing.com summary says "90 customers now actively connected" but never says "server". LSEG's own Q1 2026 Trading Update (April 23, 2026) says "Since launch in December 2025, 90 customers have connected via our Model Context Protocol ('MCP') server". The fix swaps the summary for LSEG's own release, graded P. The two sentences calling the figure secondary come out.

CURRENT	FIXED
LSEG had 90 customers connected to its MCP server by April 2026 [Investing.com summary]. The figure comes from a secondary summary of its results slides. Exhibit 12 source cell: LSEG press release [2]; Investing.com summary [74] Exhibit 12 note: The LSEG customer count is from a secondary summary [74].	LSEG had 90 customers connected to its MCP server by April 2026 [74]. Exhibit 12 source cell: LSEG press releases [2, 74] Exhibit 12 note: sentence removed. Register 74: London Stock Exchange Group plc: Q1 2026 Trading Update. LSEG press release, April 23, 2026.

---

2. Exhibit 16, "Get help" row (page 14)

The cell says "SDK changes from outside developers". Pull request 57 was written from a blackrock.com address, so it is not from an outside developer. Pull request 53 is by Willem du Preez of Janus Henderson, so it fits. Pull request 57 is cited nowhere else, so it leaves the register.

CURRENT	FIXED
SDK change for enterprise gateways, SDK change for Pydantic v2 [pull request 57], Studio page, APIs page	SDK change for enterprise gateways [56], SDK change for extra HTTP headers [57], Studio page [14], APIs page [30]

---

3. Crockett quote (page 9)

Crockett is talking about the custom copilots firms build, not Aladdin Copilot: "a lot of firms create their own custom copilots. Now, in order to do that, you need to actually create the plug-ins. There's no copilot without plug-ins."

CURRENT	FIXED
On BlackRock's podcast, Microsoft's Adrian Crockett said Copilot depends on its plugins: "There's no copilot without plug-ins".	On BlackRock's podcast, Microsoft's Adrian Crockett said firms building their own copilots need plugins: "There's no copilot without plug-ins".

---

4. Sewdass on modular systems (page 11)

The captions read "very much accelerating over the last 2024 months is this move to more of a modular approach". "Two years" is our reading of a garbled caption, not her words. The fix quotes only what she clearly said.

CURRENT	FIXED
She said clients have moved over the last two years "to more of a modular approach" [10].	She said clients are making a "move to more of a modular approach" [10].

5. HPS quote (page 8)

On the webinar, the HPS line is about the design of the private credit data model, not the new transaction types alone.

CURRENT	FIXED
The team said it designed the new types with BlackRock's own professionals and "our new colleagues from HPS" [70].	The team said it designed its private credit data model with BlackRock's own professionals and "our new colleagues from HPS" [70].

6. Exhibit 4 source note (page 4)

The Studio page does not carry the "Additional Aladdin Studio resources" list. The APIs, ATX and ADX pages do. The Studio page stays cited for what it does back.

CURRENT	FIXED
Source: BlackRock's Studio, APIs, ATX and ADX pages, which list Data Cloud, ADX, Aladdin Compute and ATX as "Additional Aladdin Studio resources" [14, 30, 32, 33]	Source: BlackRock's Studio page [14]; its APIs, ATX and ADX pages, which list Data Cloud, ADX, Aladdin Compute and ATX as "Additional Aladdin Studio resources" [30, 32, 33]

7. Job posting (page 6)

The posting says "Set and evolve the vision for Studio Developer as Aladdin's extensibility layer". The phrase is about Studio Developer.

CURRENT	FIXED
A 2026 job posting calls Studio "Aladdin's extensibility layer" [48].	A 2026 job posting calls Studio Developer "Aladdin's extensibility layer" [48].

8. SDK changes from a client engineer (page 7)

The commit patch shows that a Janus Henderson engineer wrote the changes. It does not show BlackRock accepting them, so its superscript moves to the sentence it supports. That added a line and pushed the page over, so "written by" became "from" in the first sentence to keep 19 pages.

CURRENT	FIXED
A second kind of record is code written by a client's engineers. In December 2025 an engineer at a client firm submitted two changes to the open-source SDK. … The BlackRock engineer who co-wrote the SDK's launch post accepted both into the SDK [38, 55, 56, 57].	A second kind of record is code from a client's engineers. In December 2025 an engineer at a client firm submitted two changes to the open-source SDK [55]. … The BlackRock engineer who co-wrote the SDK's launch post accepted both into the SDK [38, 56, 57].
